# Preface

Thank you for purchasing our programmable controller PCB1. This manual contains instructions for the mounting, functions, operations and notes when operating the PCB1. To prevent accidents arising from the misuse of this controller, please ensure the operator receives this manual.

**Abbreviations used in this manual**

| Abbreviation | Term |
|---|---|
| PV | Process variable |
| SV | Desired value |
| MV | Output manipulated variable |
| OUT1 | Control output OUT1 |
| OUT2 | Control output OUT2 |
| AT | Auto-tuning |

**Characters used in this manual** (⬚: No character is indicated)

| Indication | ⁻I | 0 | I | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | C | F |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Number, ℃/℉ | -1 | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | ℃ | ℉ |
| Indication | A | b | c | d | E | F | G | H | I | J | k | L | m |
| Alphabet | A | B | C | D | E | F | G | H | I | J | K | L | M |
| Indication | n | o | P | q | r | S | T | U | v | w | x | y | z |
| Alphabet | N | O | P | Q | R | S | T | U | V | W | X | Y | Z |

# Notes

• This instrument should be used in accordance with the specifications described in the manual.
  If it is not used according to the specifications, it may malfunction or cause a fire.
• Be sure to follow the warnings, cautions and notices. If they are not observed, serious injury or malfunction may occur.
• The contents of this instruction manual are subject to change without notice.
• Care has been taken to ensure that the contents of this instruction manual are correct, but if there are any doubts, mistakes or questions, please inform our sales department.
• This instrument is designed to be installed through the control panel. If it is not, measures must be taken to ensure that the operator cannot touch power terminals or other high voltage sections.
• Any unauthorized transfer or copying of this document, in part or in whole, is prohibited.
• Shinko Technos Co., Ltd. is not liable for any damage or secondary damage(s) incurred as a result of using this product, including any indirect damage.

# Safety Precautions (Be sure to read these precautions before using our products.)

The safety precautions are classified into categories: "Warning" and "Caution". Depending on circumstances, procedures indicated by ⚠ Caution may result in serious consequences, so be sure to follow the directions for usage.

⚠ **Warning** — Procedures which may lead to dangerous conditions and cause death or serious injury, if not carried out properly.

⚠ **Caution** — Procedures which may lead to dangerous conditions and cause superficial to medium injury or physical damage or may degrade or damage the product, if not carried out properly.

---

## ⚠ Warning

• To prevent an electrical shock or fire, only Shinko or other qualified service personnel may handle the inner assembly.

• To prevent an electrical shock, fire or damage to the instrument, parts replacement may only be undertaken by Shinko or other qualified service personnel.

---

## ⚠ Safety Precautions

• To ensure safe and correct use, thoroughly read and understand this manual before using this instrument.

• This instrument is intended to be used for industrial machinery, machine tools and measuring equipment. Verify correct usage after purpose-of-use consultation with our agency or main office. (Never use this instrument for medical purposes with which human lives are involved.)

• External protection devices such as protective equipment against excessive temperature rise, etc. must be installed, as malfunction of this product could result in serious damage to the system or injury to personnel. Proper periodic maintenance is also required.

• This instrument must be used under the conditions and environment described in this manual. Shinko Technos Co., Ltd. does not accept liability for any injury, loss of life or damage occurring due to the instrument being used under conditions not otherwise stated in this manual.

---

## ⚠ Caution with Respect to Export Trade Control Ordinance

To avoid this instrument from being used as a component in, or as being utilized in the manufacture of weapons of mass destruction (i.e. military applications, military equipment, etc.), please investigate the end users and the final use of this instrument. In the case of resale, ensure that this instrument is not illegally exported.

# 1. Installation Precautions

## ⚠ Caution

**This instrument is intended to be used under the following environmental conditions (IEC61010-1): Overvoltage category Ⅱ, Pollution degree 2**
**Ensure the mounting location corresponds to the following conditions:**

• A minimum of dust, and an absence of corrosive gases

• No flammable, explosive gases

• No mechanical vibrations or shocks

• No exposure to direct sunlight, an ambient temperature of -10 to 55℃ (14 to 131℉) that does not change rapidly, and no icing

• An ambient non-condensing humidity of 35 to 85 %RH

• No large capacity electromagnetic switches or cables through which large current is flowing

• No water, oil or chemicals or where the vapors of these substances can come into direct contact with the unit

• Please note that the ambient temperature of this unit – not the ambient temperature of the control panel – must not exceed 55℃ (131℉) if mounted through the face of a control panel, otherwise the life of the electronic components (especially electrolytic capacitors) may be shortened.

**Note: Avoid setting this instrument directly on or near flammable material even though the case of this instrument is made of flame-resistant resin.**

# 2. Wiring Precautions

## ⚠ Caution

- Do not leave wire remnants in the instrument, as they could cause a fire or malfunction.
- Use the solderless terminal with an insulation sleeve in which the M3 screw fits when wiring the instrument.
- The terminal block of this instrument is designed to be wired from the left side. The lead wire must be inserted from the left side of the terminal, and fastened with the terminal screw.
- Tighten the terminal screw using the specified torque. If excessive force is applied to the screw when tightening, the terminal screw or case may be damaged.
- Do not pull or bend the lead wire on the terminal side when wiring or after wiring, as it could cause malfunction.
- This instrument does not have a built-in power switch, circuit breaker and fuse. It is necessary to install a-power switch, circuit breaker and fuse near the controller.
  (Recommended fuse: Time-lag fuse, rated voltage 250 V AC, rated current 2 A)
- For a 24 V AC/DC power source, do not confuse polarity when using direct current (DC).
- Do not apply a commercial power source to the sensor which is connected to the input terminal nor allow the power source to come into contact with the sensor.
- Use a thermocouple and compensating lead wire according to the sensor input specifications of this controller.
- Use the 3-wire RTD according to the sensor input specifications of this controller.
- For DC voltage input, (+) side input terminal number of 0 to 5 V DC, 1 to 5 V DC, 0 to 10 V DC differs from that of 0 to 1 V DC.

| Terminal Number | DC Voltage Input |
|---|---|
| 21 | (+) side of 0 to 5 V DC, 1 to 5 V DC, 0 to 10 V DC |
| 22 | (+) side of 0 to 1 V DC |

- When using a relay contact output type, externally use a relay according to the capacity of the load to protect the built-in relay contact.
- When wiring, keep input wires (thermocouple, RTD, etc.) away from the AC power sources or load wires.

# 3. Operation and Maintenance Precautions

## ⚠ Caution

- It is recommended that AT be performed on the trial run.
- Do not touch live terminals. This may cause electrical shock or problems in operation.
- Turn the power supply to the instrument OFF before retightening the terminal or cleaning.
  Working on or touching the terminal with the power switched ON may result in severe injury or death due to electrical shock.
- Use a soft, dry cloth when cleaning the instrument.
  (Alcohol based substances may tarnish or deface the unit.)
- As the display section is vulnerable, be careful not to put pressure on, scratch or strike it with a hard object.

# Contents

# 1. Model

## 1.1 Model

| PCB1 | ☐ | ☐ | 0- | ☐ | ☐ | | |
|------|---|---|----|----|----|---|---|
| Control output OUT1 | R | | | | | Relay contact output | |
| | S | | | | | Non-contact voltage output | |
| | A | | | | | Direct current output | |
| Power supply voltage | | 0 | | | | 100 to 240 V AC | |
| | | 1 | | | | 24 V AC/DC | |
| Input | | | 0 | | | Multi-range | |
| Option 1 | | | | 0 | | | Option 1 not needed. |
| | | | | 1 | | EV2(DR) (*1) | Event output EV2, or Heating/Cooling control output OUT2 Relay contact output |
| | | | | 2 | | DS | Heating/Cooling control output OUT2 Non-contact voltage output |
| | | | | 3 | | DA | Heating/Cooling control output OUT2 Direct current output |
| | | | | 4 | | P24 | Insulated power output |
| | | | | 5 | | EV3(DR) (*1), (*2) | Event output EV3 + Event output EV2, or Heating/Cooling control output OUT2 Relay contact output |
| | | | | 6 | | EV3DS (*2) | Event output EV3 + Heating/Cooling control output OUT2 Non-contact voltage output |
| | | | | 7 | | EV3DA (*2) | Event output EV3 + Heating/Cooling control output OUT2 Direct current output |
| Option 2 | | | | | 0 | | Option 2 not needed. |
| | | | | | 1 | C5W(20A) (*3) | Serial communication + Heater burnout alarm output + Event input (*4) |
| | | | | | 2 | C5W(100A) (*3) | Serial communication + Heater burnout alarm output + Event input (*4) |
| | | | | | 3 | EIW(20A) (*3) | Event input + Heater burnout alarm output |
| | | | | | 4 | EIW(100A) (*3) | Event input + Heater burnout alarm output |
| | | | | | 5 | EIT (*2) | Event input + Transmission output (4 – 20 mA DC) |
| | | | | | 6 | C5 | Serial communication RS-485 + Event input (*4) |
| | | | | | 7 | W(20A) (*3) | Heater burnout alarm output |
| | | | | | 8 | W(100A) (*3) | Heater burnout alarm output |
| | | | | | 9 | EI | Event input + Event output EV3 |

(*1) When 'Heating/Cooling control Relay contact output' is selected in [Event output EV2 allocation], it works as the DR option.
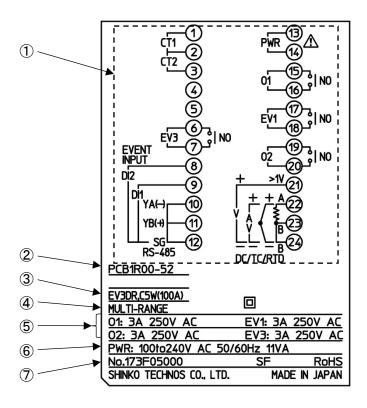

(*2) The EV3D☐ option and EIT option cannot be ordered together.

(*3) When control output OUT1 is Relay contact output or Non-contact voltage output, the C5W, EIW or W option can be ordered.

(*4) 'SV digital transmission' or 'SV digital reception' can be selected in [Communication protocol].

## 1.2　How to Read the Model Label

The model label is attached to the right side of the case.

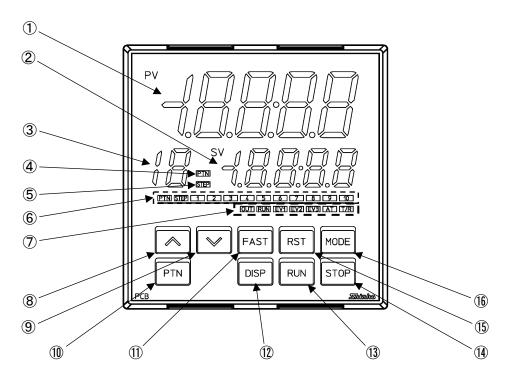

(Fig. 1.2-1)

| No. | Description | Example |
|-----|-------------|---------|
| ① | Terminal arrangement | Terminal arrangement of PCB1R00-52 (*1) |
| ② | Model | PCB1R00-52 |
| ③ | Option | EV3DR (Event output EV3 + Event output EV2, or Heating/Cooling control output OUT2 Relay contact output) <br> C5W(100A) [Serial communication + Heater burnout alarm output (100 A) + Event input] (*2) |
| ④ | Input | MULTI-RANGE (Multi-range input) |
| ⑤ | Control output, Event output | O1: 3 A 250 V AC (Control output OUT1) <br> EV1: 3 A 250 V AC (Event output EV1) <br> O2: 3 A 250 V AC (Control output OUT2) <br> EV3: 3 A 250 V AC (Event output EV3) |
| ⑥ | Power supply, Power consumption | 100 to 240 V AC 50/60 Hz, <br> 11 VA |
| ⑦ | Serial number | No. 173F05000 |

(*1) Terminal arrangement diagram differs depending on the model.

(*2) For Heater burnout alarm output (C5W, EIW, W options), CT rated current is entered in bracket ( ).

# 2. Names and Functions of Controller

(Fig. 2-1)

**Display, Indicator**
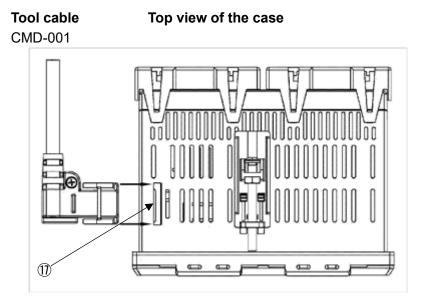

| No. | Name | Description |
|-----|------|-------------|
| ① | **PV Display (Red)** | Indicates process variable (PV) in RUN mode. Indicates setting characters in Setting mode. Flashes during Wait action or program control HOLD in program control. |
| ② | **SV Display (Green)** | Indicates the desired value (SV), Output manipulated variable (MV), or Remaining time (TIME) in RUN mode. Retains display indication at power OFF. Indicates the set values in setting mode. |
| ③ | **PTN/STEP Display (Orange)** | Indicates the pattern number or step number. Each time the DISP key is pressed, the PTN/STEP Display (③), and the PTN/STEP indicator (⑥) alternately indicate the pattern number and step number. Flashes during Wait action or when the step number is indicated. If 'SV digital reception' is selected in [Communication protocol], ⌐ is indicated. |
| ④ | **PTN indicator (Orange)** | Lights up when the pattern number is indicated on the PTN/STEP Display. |
| ⑤ | **STEP indicator (Orange)** | Lights up when the step number is indicated on the PTN/STEP Display. |
| ⑥ | **PTN/STEP indicator (Green)** | LED for the pattern number or step number lights up. If the PTN/STEP Display (③) indicates the pattern number, the PTN/STEP indicator (⑥) lights up its step number. If the PTN/STEP Display indicates the step number, the PTN/STEP indicator lights up its pattern number. Each time the DISP key is pressed, the PTN/STEP indicator and the PTN/STEP Display alternately indicate the pattern number and step number. |

**Action Indicator**

| No. | Name | Description |
|---|---|---|
| ⑦ | **OUT (Green)** | Lights up when control output OUT1 is ON. For direct current output, flashes corresponding to the MV in 125 ms cycles. |
| | **RUN (Orange)** | Lights up during program control RUN. Flashes during program control HOLD or Fixed value control. |
| | **EV1 (Red)** | Lights up when Event output EV1 is ON. |
| | **EV2 (Red)** | Lights up when Event output EV2 [(EV2, EV3(DR) options] is ON. Lights up when control output OUT2 [Cooling output (EV2, DS, DA or EV3D☐ option)] is ON. For direct current output (DA, EV3DA options), flashes corresponding to the MV in 125 ms cycles. |
| | **EV3 (Red)** | Lights up when Event output EV3 (EV3D☐, EI options) is ON. |
| | **AT (Orange)** | Flashes while AT is performing. |
| | **T/R (Orange)** | Lights up during Serial communication (C5W, C5 options) TX (transmitting) output. |

**Key**

| No. | Name | Description |
|---|---|---|
| ⑧ | **UP key** | In setting mode, increases the numerical value. By pressing for approx. 1 second during program control RUN, time progress pauses, and Fixed value control continues with the step SV at that time (program control HOLD function). |
| ⑨ | **DOWN key** | In setting mode, decreases the numerical value. |
| ⑩ | **PTN key (Pattern key)** | During program control STOP (in Standby), selects program pattern number to perform or to set. By pressing during program control RUN, moves to Monitor mode. In Monitor mode, switches the indication items. |
| ⑪ | **FAST key** | In setting mode, makes the numeric value change faster. During program control RUN, makes step time progress 60 times faster. |
| ⑫ | **DISP key (Display key)** | During RUN mode, the PTN/STEP display and PTN/STEP indicator alternately indicates the pattern number and step number. In setting mode, registers the setting data, and moves back to the previous setting item. |
| ⑬ | **RUN key** | Performs program control, or cancels program control HOLD while program control is held. By pressing for approx. 1 second during program control RUN, stops performing step, and proceeds to the next step (Advance function). |
| ⑭ | **STOP key** | Stops program control by pressing for approx. 1 second during program control RUN. Cancels pattern end output. |
| ⑮ | **RST key (Reset key)** | In setting mode, registers the setting data, and moves to RUN mode. |
| ⑯ | **MODE key** | In setting mode, registers the setting data, and moves to the next setting item. |

**Tool cable**        **Top view of the case**
CMD-001

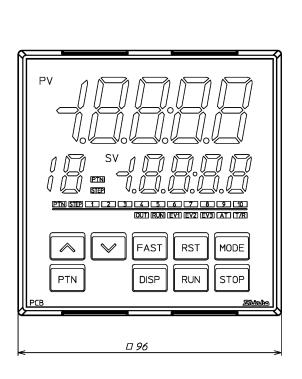

(Fig. 2-2)
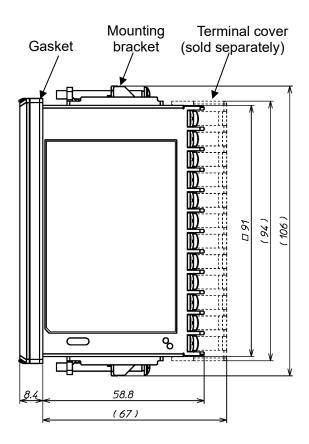

**Connector**

| No. | Name | Description |
|---|---|---|
| ⑰ | **Tool cable connector** | By connecting the Tool cable (CMD-001, sold separately), the following operations can be conducted from an external computer, using the Monitoring software SWM-PCB101M.<br>Tool cable connector is at the top of the instrument.<br>• Reading and writing of step SV, step time, PID and various set values<br>• Reading of PV and action status<br>• Function change |

# 3. Mounting to the Control Panel

### 3.1 External Dimensions (Scale: mm)

( ): Size when mounting brackets or terminal cover (sold separately) are mounted.
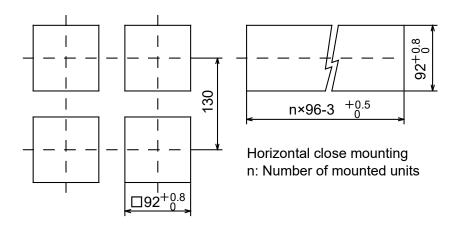

(Fig. 3.1-1)

### 3.2 Panel Cutout (Scale: mm)

## ⚠ Caution

**If horizontal close mounting is used for the controller, IP66 specification (Drip-proof/Dust-proof) may be compromised, and all warranties will be invalidated.**

130

$\square 92^{+0.8}_{0}$

$92^{+0.8}_{0}$

$n \times 96\text{-}3 \ ^{+0.5}_{0}$

Horizontal close mounting
n: Number of mounted units

(Fig. 3.2-1)

### 3.3 CT (Current Transformer) External Dimensions (Scale: mm)

CTL-6-S-H (for 20 A)  CTL-12-S36-10L1U (for 100 A)

(Fig. 3.3-1)

## 3.4 Mounting to, and Removal from, the Control Panel

> ⚠ **Caution**
>
> **As the case of the PCB1 is made of resin, do not use excessive force while tightening screws, or the case and mounting brackets could be damaged.**
> **The torque should be 0.1 N•m.**

### 3.4.1 How to Mount the Unit

Mount the controller vertically to the flat, rigid panel to ensure it adheres to the Drip-proof/Dust-proof specification (IP66).
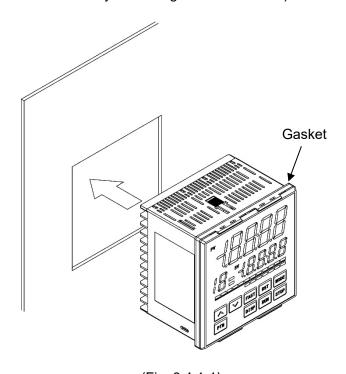

If the horizontal close mounting is used for the controller, IP66 specification (Drip-proof/Dust-proof) may be compromised, and all warranties will be invalidated.

Mountable panel thickness: 1 to 7 mm

(1) Insert the controller from the front side of the control panel. (Fig. 3.4.1-1)

If the Drip-proof/Dust-proof specification (IP66) is not necessary, the gasket may be removed.
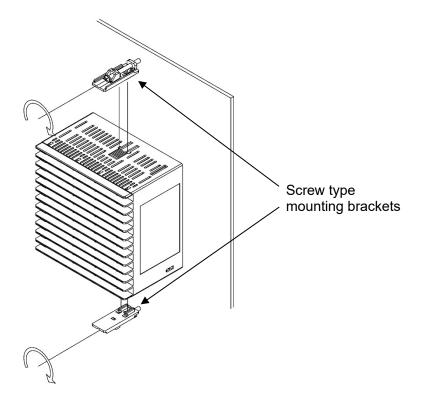

(Please keep in mind the warranty is void if gasket is removed).

Gasket

(Fig. 3.4.1-1)

(2) Attach the mounting brackets into the slots at the top and bottom of the case, and secure the controller in place with the screws. (Fig. 3.4.1-2)

The torque is 0.1 N•m.

Screw type mounting brackets

(Fig. 3.4.1-2)

### 3.4.2   How to Remove the Mounting Brackets and Unit

(1)   Turn the power to the unit OFF, and disconnect all wires before removing the unit.

(2)   Loosen the screws of the mounting brackets, and remove the mounting brackets.

(3)   Pull the unit out from the front of the control panel.

# 4. Wiring

> ## ⚠ Warning
>
> **Turn the power supply to the instrument off before wiring or checking.**
> **Working on or touching the terminal with the power switched on may result in severe injury**
> **or death due to electrical shock.**

> ## ⚠ Caution
>
> - Do not leave wire remnants in the instrument, as they could cause a fire or malfunction.
> - Use the solderless terminal with an insulation sleeve in which the M3 screw fits when wiring the instrument.
> - The terminal block of this instrument is designed to be wired from the left side. The lead wire must be inserted from the left side of the terminal, and fastened with the terminal screw.
> - Tighten the terminal screw using the specified torque. If excessive force is applied to the screw when tightening, the terminal screw or case may be damaged.
> - Do not pull or bend the lead wire on the terminal side when wiring or after wiring, as it could cause malfunction.
> - This instrument does not have a built-in power switch, circuit breaker and fuse. It is necessary to install a-power switch, circuit breaker and fuse near the controller.
>   (Recommended fuse: Time-lag fuse, rated voltage 250 V AC, rated current 2 A)
> - For a 24 V AC/DC power source, do not confuse polarity when using direct current (DC).
> - Do not apply a commercial power source to the sensor which is connected to the input terminal nor allow the power source to come into contact with the sensor.
> - Use a thermocouple and compensating lead wire according to the sensor input specifications of this controller.
> - Use the 3-wire RTD according to the sensor input specifications of this controller.
> - For DC voltage input, (+) side input terminal number of 0 to 5 V DC, 1 to 5 V DC, 0 to 10 V DC differs from that of 0 to 1 V DC.
>
> | Terminal Number | DC Voltage Input |
> | --- | --- |
> | 21 | (+) side of 0 to 5 V DC, 1 to 5 V DC, 0 to 10 V DC |
> | 22 | (+) side of 0 to 1 V DC |
>
> - When using a relay contact output type, externally use a relay according to the capacity of the load to protect the built-in relay contact.
> - When wiring, keep input wires (thermocouple, RTD, etc.) away from the AC power sources or load wires.

## 4.1   Terminal Arrangement

(Fig. 4.1-1)

| Terminal Code | Description |
|---|---|
| PWR | Supply voltage 100 to 240 V AC or 24 V AC/DC<br>**(For 24 V DC, ensure polarity is correct.)** |
| O1 | Control output OUT1 |
| EV1 | Event output EV1 |
| EV2 | Event output EV2 [EV2, EV3(DR) options] |
| O2 | Control output OUT2 (EV2, DS, DA, EV3D□ options) |
| P24 | Insulated power output 24 V DC (P24 option) |
| TC | Thermocouple input |
| RTD | RTD input |
| DC | Direct current, DC voltage input |
| CT1 | CT (current transformer) input 1 (C5W, EIW, W options) |
| CT2 | CT (current transformer) input 2 (C5W, EIW, W options) |
| RS-485 | Serial communication RS-485 (C5W, C5 options) |
| EVENT INPUT | Event input DI1 (C5W, EIW, EIT, C5, EI options)<br>Event input DI2 (C5W, EIW, EIT, C5, EI options) |
| EV3 | Event output EV3 (EV3D□, EI options) |
| TRANSMIT OUTPUT | Transmission output (EIT option) |
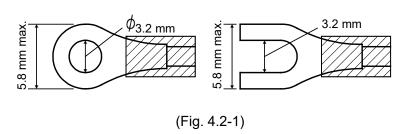

## 4.2 Lead Wire Solderless Terminal

Use a solderless terminal with an insulation sleeve in which an M3 screw fits as shown below.
The torque should be 0.63 N•m.

| Solderless Terminal | Manufacturer | Model | Tightening Torque |
|---|---|---|---|
| Y-type | Nichifu Terminal Industries Co., Ltd. | TMEV1.25Y-3 | 0.63 N·m |
| Y-type | Japan Solderless Terminal MFG Co., Ltd. | VD1.25-B3A | 0.63 N·m |
| Ring-type | Nichifu Terminal Industries Co., Ltd. | TMEV1.25-3 | 0.63 N·m |
| Ring-type | Japan Solderless Terminal MFG Co., Ltd. | V1.25-3 | 0.63 N·m |

(Fig. 4.2-1)
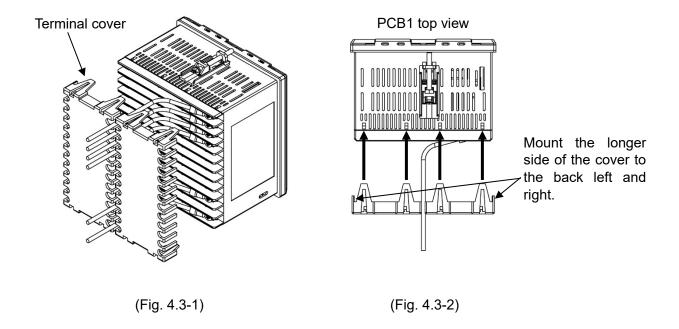

## 4.3 When Using a Terminal Cover

When using a terminal cover (sold separately), make sure the longer side is on the back left and right side of the case.

Pass the wires from terminal numbers 13 to 24 between terminal covers.

(Fig. 4.3-1)

(Fig. 4.3-2)

Mount the longer side of the cover to the back left and right.

## 4.4   Wiring

For the terminal arrangement, refer to Section '4.1 Terminal Arrangement' (p.17).

### 4.4.1   Power Supply

Power supply voltage is 100 to 240 V AC or 24 V AC/DC.

**For a 24 V AC/DC power source, ensure polarity is correct when using direct current (DC).**

| 100 to 240 V AC, 24 V AC | 24 V DC |
|---|---|
| PWR ⑬ ⑭ ⚠ | + ⑬ PWR − ⑭ ⚠ |

### 4.4.2   Control Output OUT1 and OUT2

When EV2, DS, DA or EV3D☐ option is ordered, control output OUT2 is available.

Specifications of Control output OUT1 and OUT2 are shown below.

| Relay contact | 1a |
|---|---|
| | Control capacity: 3 A 250 V AC (resistive load), |
| | 1 A 250 V AC (inductive load cos$\phi$=0.4) |
| | Electrical life: 100,000 cycles |
| | Minimum applicable load: 10 mA 5 V DC |
| **Non-contact voltage (for SSR drive)** | 12 V DC±15% |
| | Max. 40 mA (short circuit protected) |
| **Direct current** | 4 to 20 mA DC |
| | Load resistance: Max. 550 Ω |

| Relay contact | Non-contact voltage, Direct current |
|---|---|
| O1 ⑮ ⑯ \| NO | + ⑮ O1 − ⑯ |
| EV2/O2 ⑲ ⑳ \| NO | + ⑲ O2 − ⑳ |

Number of Shinko SSR units when connected in parallel (for Non-contact voltage output):
• SA-400 series: 5 units
• SA-500 series: 2 units

### 4.4.3 Input

Each input wiring is shown below.

**Note: For DC voltage input, (+) side input terminal number of 0 to 5 V DC, 1 to 5 V DC, 0 to 10 V DC differs from that of 0 to 1 V DC.**

| Thermocouple | RTD | Direct current, DC voltage (0 to 1 V) | DC voltage (0 to 5 V, 1 to 5 V, 0 to 10 V) |
|---|---|---|---|
|  |  |  |  |

### 4.4.4 Event Output EV1, EV2 and EV3

Event output EV1 is a standard feature.

Event output EV2 is available when EV2 or EV3(DR) option is ordered.

Event output EV3 is available when EV3D☐ or EI option is ordered.

Specifications of Event output EV1, EV2 and EV3 are shown below.

| Relay contact | 1a<br>Control capacity: 3 A 250 V AC (resistive load)<br>　　　　　　　　　 1 A 250 V AC (inductive load $\cos\phi$=0.4)<br>Electrical life: 100,000 cycles<br>Minimum applicable load: 10 mA 5 V DC |
|---|---|

| Event Output EV1 | Event Output EV2 | Event Output EV3 |
|---|---|---|
|  |  |  |
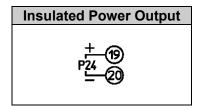

### 4.4.5 Insulated Power Output

If P24 option is ordered, the Insulated power output is available.
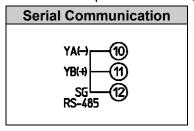

Specifications of Insulated power output are shown below.

| Output voltage | 24±3 V DC (When load current is 30 mA DC) |
|---|---|
| Ripple voltage | Within 200 mV DC (When load current is 30 mA DC) |
| Max. load current | 30 mA DC |

| Insulated Power Output |
|---|
|  |
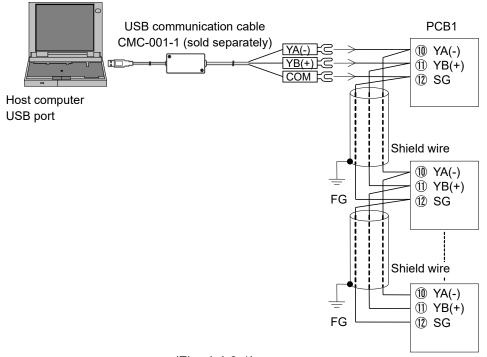

### 4.4.6 Serial Communication

If the C5W or C5 option is ordered, Serial communication is available.

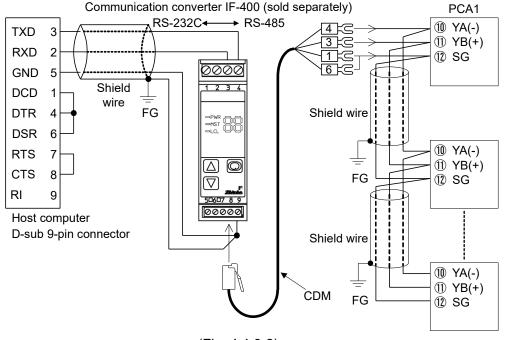

**(1) Serial Communication**

  **• When using USB communication cable CMC-001-1 (sold separately)**

(Fig. 4.4.6-1)

  **• When using communication converter IF-400 (sold separately)**

(Fig. 4.4.6-2)

**(2) SV digital transmission**

**If 'SV digital transmission' is selected in [Communication protocol]:**

Step SV can be digitally transmitted to the connected Shinko indicating controllers with the communication function (C5 option).

**If 'SV digital reception' is selected in [Communication protocol]:**

Step SV can be received via SVTC command from the connected Shinko programmable controllers PCA1 or PCB1 (on which 'SV digital transmission' should be selected in [Communication protocol]).
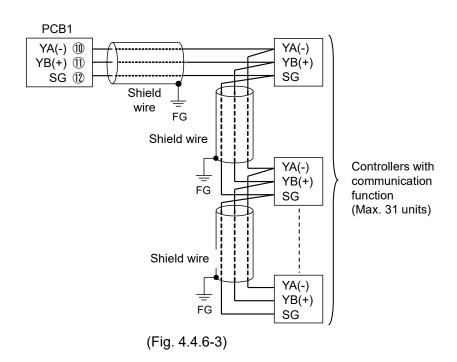

Update cycle: 250 ms

## Wiring

For the PCB1 and controllers with the communication function, connect YA (-) to YA (-), YB (+) to YB (+), SG to SG terminal respectively.

Up to 31 units can be connected.

**Wiring example of PCB1 and controllers with communication function**

(Fig. 4.4.6-3)

## Shield wire
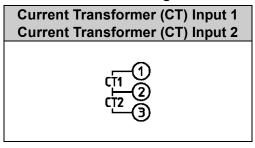

Connect only one end of the shield to the FG to avoid a ground loop. If both ends of the shield wire are connected to the FG, the circuit will be closed, resulting in a ground loop. This may cause noise. Be sure to ground the FG.

Recommended cable: OTSC-VB 2PX0.5SQ (made by Onamba Co., Ltd.) or equivalent (Use a twisted pair cable.)

### 4.4.7 CT Input 1 and CT Input 2
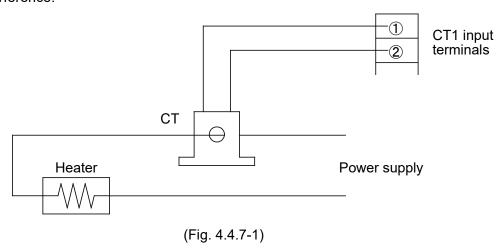

Current Transformer (CT) input is available when Heater burnout alarm output (C5W, EIW, W options) is ordered.

**Cannot be used for detecting heater current under phase control.**

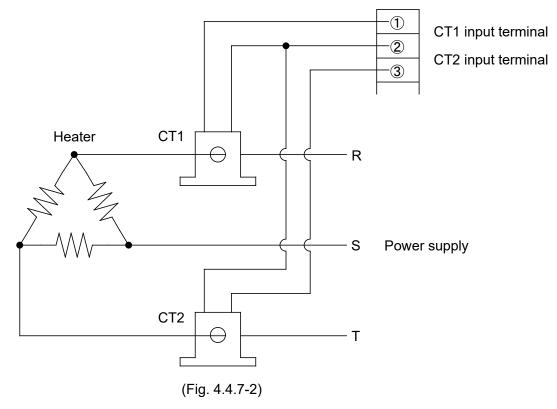

Use the CT (current transformer) provided, and pass one lead wire of the heater circuit into the hole of the CT. (Fig. 4.4.7-1)
When wiring, keep the CT wire away from AC sources or load wires to avoid the external interference.

(Fig. 4.4.7-1)

When using 3-phase, pass any 2 lead wires of R, S, T into the CT, and connect them to CT1 (①-②) and CT2 (②-③) terminals. (Fig. 4.4.7-2)

(Fig. 4.4.7-2)
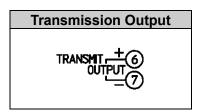

### 4.4.8  Transmission Output

If the EIT option is ordered, Transmission output is available.

Specifications of Transmission output are shown below.

| Resolution | 12000 |
|---|---|
| Output | 4 to 20 mA DC<br>Load resistance: Max. 550 Ω |
| Output accuracy | Within ±0.3% of Transmission output span |
| Response time | 400 ms + Input sampling period (0%→90%) |

**Transmission Output**

TRANSMIT ＋ ⑥
OUTPUT － ⑦

Converting the value (PV, SV or MV transmission) to analog signal every 125 ms,
outputs the value in current. (Factory default: PV transmission)
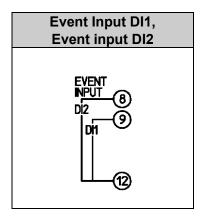

Outputs Transmission output low limit value if Transmission output high limit and low limit value

are the same.

If SV or MV transmission is selected, 4 mA is output while in program control STOP (in Standby).

### 4.4.9  Event Input DI1 and DI2

When C5W, EIW, EIT, C5 or EI option is ordered, Event input DI1 or Event input DI2 is available.

Specifications of Event input are shown below.

| Circuit current when closed | Approx. 16 mA |
|---|---|

**Event Input DI1,**
**Event input DI2**

EVENT
INPUT
DI2 ⑧
⑨
DI1
⑫

Signal edge action from OFF to ON / ON to OFF is engaged. However, when the power is turned
ON, level action is used except the Program control Advance function.
If the same item – except 'Pattern number selection' – is selected in [Event input DI1 allocation] and
[Event input DI2 allocation], OR calculation [if any one is ON (Closed), the function activates] begins.

An action changed by Event input DI□ has priority.

If 'Pattern number selection' is selected in [Event input DI1/DI2 allocation], Patterns 2 to 4 can be selected by ON (Closed) or OFF (Open) status of Event input DI1 and DI2.

Pattern numbers selected by Event input have priority over pattern numbers selected by keypad operation.

To select pattern numbers by keypad, make sure all Event inputs are in OFF (Open) status.

• When 'Pattern number selection' is selected only for Event input DI1:

| Pattern number | * | 2 |
|---|---|---|
| Event input DI1 | OFF (Open) | ON (Closed) |

 * This number will be selected by keypad operation.
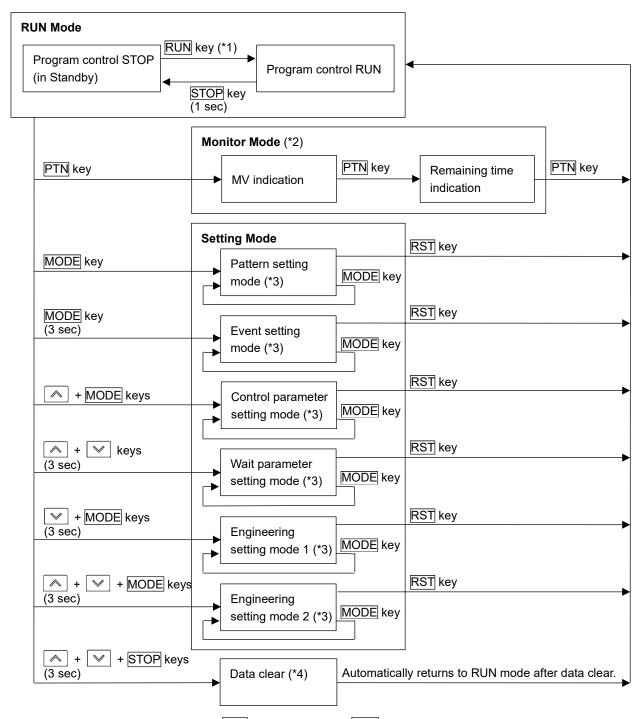

• When 'Pattern number selection' is selected for both Event input DI1 and DI2:

| Pattern number | * | 2 | 3 | 4 |
|---|---|---|---|---|
| Event input DI1 | OFF (Open) | ON (Closed) | OFF (Open) | ON (Closed) |
| Event input DI2 | OFF (Open) | OFF (Open) | ON (Closed) | ON (Closed) |

 * This number will be selected by keypad operation.

# 5. Outline of Key Operation and Each Mode

## 5.1 Outline of Key Operation

**RUN Mode**

| | |
|---|---|
| Program control STOP (in Standby) | Program control RUN |

RUN key (*1) →

STOP key (1 sec) ←

PTN key →

**Monitor Mode** (*2)

MV indication → PTN key → Remaining time indication → PTN key →

**Setting Mode**

MODE key → Pattern setting mode (*3) — MODE key — RST key →

MODE key (3 sec) → Event setting mode (*3) — MODE key — RST key →

⋀ + MODE keys → Control parameter setting mode (*3) — MODE key — RST key →

⋀ + ⋁ keys (3 sec) → Wait parameter setting mode (*3) — MODE key — RST key →

⋁ + MODE keys (3 sec) → Engineering setting mode 1 (*3) — MODE key — RST key →

⋀ + ⋁ + MODE keys (3 sec) → Engineering setting mode 2 (*3) — MODE key — RST key →

⋀ + ⋁ + STOP keys (3 sec) → Data clear (*4) — Automatically returns to RUN mode after data clear.

(*1) Select a pattern number with the PTN key, and press the RUN key. Program control will start.
(*2) Effective during Program control RUN.
(*3) If the MODE key is pressed, settings or selections are registered, and moves to the next setting item.
   If the MODE key is pressed at the last setting item in each setting mode, the unit returns to the 1st setting item.
   If the DISP key is pressed, settings or selections are registered, and moves back to the previous setting item.
   If the DISP key is pressed at the 1st setting item in each setting mode, the unit moves back to the last setting item.
(*4) Effective during program control STOP (in Standby).

(Fig. 5.1-1)

**Modes**

| Mode | Description | |
|---|---|---|
| **RUN mode** | If power is turned ON, the unit enters RUN mode.<br>Starts from program control STOP (in Standby) or Program control RUN, depending on the status at power OFF.<br>Indication differs depending on the status below. | |
| | Program control STOP (in Standby) | The PV Display indicates PV.<br>When the PTN indicator and STEP of the PTN/STEP indicator is lit, the PTN/STEP Display indicates the pattern number.<br>While the PTN of the PTN/STEP indicator is lit, the PTN indicator, the STEP indicator and the PTN/STEP Display are unlit.<br>Other Displays and indicators are unlit. |
| | Program control RUN | The PV Display indicates PV.<br>The SV Display indicates SV, MV or remaining time.<br>The PTN indicator or STEP indicator lights up.<br>While the PTN indicator is lit, the PTN/STEP Display indicates the pattern number. STEP of the PTN/STEP indicator lights up.<br>While the STEP indicator is lit, the PTN/STEP Display indicates the step number. PTN of the PTN/STEP indicator lights up.<br>Action indicators light up depending on the operation status. |
| **Monitor mode** | By pressing the PTN key during program control RUN, the unit enters Monitor mode. The PV Display indicates PV, and the SV Display indicates MV.<br>Each time the PTN key is pressed, SV, MV or remaining time is indicated. | |
| **Setting mode** | Pattern setting mode | Sets the following:<br>Step SV, Step time, PID block number, number of repetitions, pattern link. |
| | Event setting mode | Sets the following:<br>EV□ alarm value, Time signal TS1 output OFF time, Time signal TS1 output ON time |
| | Control parameter setting mode | Sets the following:<br>AT Perform/Cancel, OUT1 proportional band, Integral time, Derivative time, ARW, OUT2 proportional band (When EV2, DS, DA or EV3D□ option is ordered), Direct/Reverse action, Loop break alarm, etc. |
| | Wait parameter setting mode | Sets the following:<br>Wait value, Wait function Enabled/Disabled for each step |
| | Engineering setting mode 1 | Sets the following:<br>Set value lock, Sensor correction, PV filter time constant, Communication parameters (When C5W or C5 option is ordered) |
| | Engineering setting mode 2 | Sets the following:<br>Input type, Scaling high limit, Scaling low limit, Event output EV□ allocation, Step time unit, Power restore action, etc. |
| **Data clear** | By pressing the ⌃, ⌄ and STOP keys (in that order) together for approx. 3 seconds during program control STOP (in Standby), Data clear Yes/No appears.<br>To clear data, select YES, and press the MODE key. The PV Display indicates � for approx. 3 seconds, and all data reverts to their factory default values. | |

### 5.2 Registering Settings and Selections

#### • How to increase/decrease setting values

To increase or decrease the set value (numeric value), use the $\boxed{\wedge}$ or $\boxed{\vee}$ key.

If the $\boxed{\wedge}$ or $\boxed{\vee}$ key is pressed with the $\boxed{\text{FAST}}$ key simultaneously, makes the numeric value change faster.

To switch the selection items, use the $\boxed{\wedge}$ or $\boxed{\vee}$ key.

#### • How to register setting data or selection data

To register the settings or selections, use the $\boxed{\text{MODE}}$ or $\boxed{\text{DISP}}$ key.

If the $\boxed{\text{MODE}}$ key is pressed, the set values (numerical values) or selected item are registered, and moves to the next setting item.

If the $\boxed{\text{MODE}}$ key is pressed at the last setting item, the unit returns to the 1st setting item.

If the $\boxed{\text{DISP}}$ key is pressed, the set values (numerical values) or selected item are registered, and moves back to the previous setting item.

If the $\boxed{\text{DISP}}$ key is pressed at the 1st setting item, the unit moves back to the last setting item.

#### • How to return to RUN mode

To return to RUN mode, use the $\boxed{\text{RST}}$ key.

If the $\boxed{\text{RST}}$ key is pressed, the set values (numerical values) or selected item will be registered, and the unit will revert to RUN mode.

### 5.3 How to Read Setting Items

Step 1 SV will be used for the explanation.
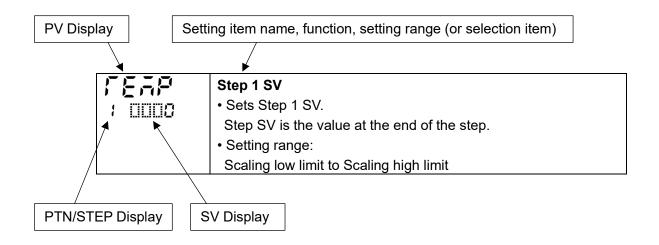

Explanation of setting items:

- **Upper left:** PV Display: Indicates setting characters.
- **Lower left:** PTN/STEP Display, SV Display

     The PTN/STEP Display indicates the pattern number or step number. Indication differs depending on the setting item.

     The SV Display indicates factory default value.

- **Right side:** Indicates the setting item or selection item, explanation of its function and setting range (or selection items).

| PV Display | Setting item name, function, setting range (or selection item) |
|---|---|
| `r E n P` `1 ☐☐☐0` | **Step 1 SV**<br>• Sets Step 1 SV.<br>  Step SV is the value at the end of the step.<br>• Setting range:<br>  Scaling low limit to Scaling high limit |

PTN/STEP Display    SV Display

# 6. Initial Settings

Setup (setting the Input type, Scaling high limit, Scaling low limit, Event output EV1 allocation, Step time unit, Power restore action, Direct/Reverse action, etc.) should be done before using this controller, according to the user's conditions.
Perform setup (or initial settings) in Engineering setting mode 2 and Control parameter setting mode.

Initial setting items and their factory default values are shown below in (Table 6-1).

If the user's specification is the same as the factory default value of this instrument, or if user's instrument has already been installed in a system after initial settings are finished, initial settings are not necessary.
Proceed to Section "7. Basic Settings and Operation" (p.38).

**(Table 6-1)**

| Initial Setting Item | Factory Default |
|---|---|
| **Engineering setting mode 2** | |
| Input type | K -200 to 1370℃ |
| Scaling high limit | 1370℃ |
| Scaling low limit | -200℃ |
| Decimal point place | No decimal point |
| Event output EV1 allocation | No event |
| Step time unit | Hours : Minutes |
| Power restore action | Stops after power is restored. |
| Step SV when program control starts | 0℃ |
| Program control start type | PV start |
| **Control parameter setting mode** | |
| OUT1 proportional cycle | Relay contact output: 30 sec |
| | Non-contact voltage output: 3 sec |
| Direct/Reverse action | Reverse action |

The following shows the procedure for initial settings.

**(1) Enter Engineering setting mode 2.**
In RUN mode, press $\boxed{\wedge}$, $\boxed{\vee}$ and $\boxed{\text{MODE}}$ keys (in that order) together for approx. 3 seconds.
The unit will enter Engineering setting mode 2.

| Characters, Factory Default | Setting Item, Function, Setting Range |
|---|---|

(Fig. 6-12)

- **Time signal output**

Time signal output OFF time and Time signal output ON time are set within total time in one pattern.

After program control starts, Time signal output turns ON during Time signal output ON time after Time signal output OFF time has elapsed.

During Wait action or program control HOLD, progress time of Time signal output stops.

When step time is changed during program control RUN, Time signal output timing is re-calculated using the changed pattern time.

**Example of program pattern setting**

| Pattern 1 | | | | | | |
|---|---|---|---|---|---|---|
| Step number | | 1 | 2 | 3 | 4 | 5 |

| | | 1 | 2 | 3 | 4 | 5 |
|---|---|---|---|---|---|---|
| Step SV | | 500 | 500 | 1000 | 1000 | 0 |
| Step time | | 0:30 | 1:00 | 0:40 | 1:00 | 2:00 |
| Time signal output | ON / OFF | | | | | |

Program control RUN        ON after 1 hour        OFF after 50 minutes

(e.g.) Time signal output setting
 Time signal output OFF time: 1 hour
 Time signal output ON time: 50 minutes

(Fig. 6-13)

**Explanation of Time signal output**

 In the above program pattern example, Time signal output turns ON one hour after program control RUN starts (30 minutes after the unit entered Step 2). Time signal output turns OFF 50 minutes after Time signal output turned ON (20 minutes after the unit entered Step 3).

## 7.2  Program Pattern Setting

### • Example of Program Pattern Setting

| Pattern 1 | | | | | |
|---|---|---|---|---|---|
| Step number | 1 | 2 | 3 | 4 | 5 |
| | | | | | |
| | | | | | |
| Step SV | 500 | 500 | 1000 | 1000 | 0 |
| Step time | 0:30 | 1:00 | 0:40 | 1:00 | 2:00 |
| PID block number | 2 | 2 | 3 | 3 | 2 |
| Wait function Enabled/Disabled | Enabled | Disabled | Enabled | Disabled | Disabled |

(Fig. 7.2-1)

### Explanation of Program Pattern

Step 1: After program control starts, control is performed so that SV gradually rises from 0℃
to 500℃ in 30 minutes.

Step 2: Control is performed to keep the SV at 500℃ for 1 hour.

Step 3: Control is performed so that SV gradually rises from 500℃ to 1000℃ for 40 minutes.

Step 4: Control is performed to keep the SV at 1000℃ for 1 hour.

Step 5: Control is performed so that SV gradually falls from 1000℃ to 0℃ in 2 hours.

### • Example of PID Block Setting

If program pattern is not set for a step, its PID block number becomes 1 (factory default).

We highly recommend that you leave the factory defaults of PID block 1 as they are, and

set the values from Block 2.

Control parameters such as PID, ARW are common to all patterns.

| Block number | OUT1 proportional band | Integral time | Derivative time | ARW | OUT2 proportional band |
|---|---|---|---|---|---|
| 1 | 10℃ | 200  sec | 50 sec | 50% | 10℃ |
| 2 | 10℃  (*) | 200 sec (*) | 50  sec  (*) | 50% (*) | 10℃  (*) |
| 3 | 10℃  (*) | 200 sec (*) | 50  sec  (*) | 50% (*) | 10℃  (*) |
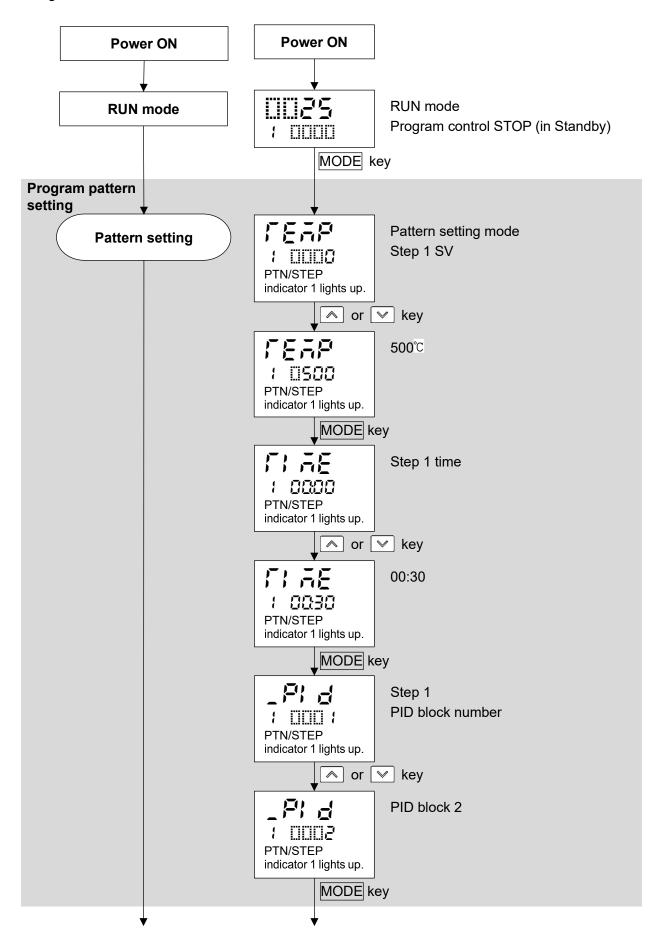

(*) Setting items in PID block are determined after performing AT. So, they are currently factory default values.

### • Example of Wait Value Setting

Wait value: 10℃

Wait value is common to all steps of each pattern.

The operation method is described below, based on the program pattern, PID block and wait value settings.

# 8. Explanation of Setting Items

Setting items for the following mode will be described:

Pattern setting mode, Event setting mode, Control parameter setting mode, Wait parameter setting mode, Engineering setting mode 1, Engineering setting mode 2.

## 8.1 Setting Items in Pattern Setting Mode

In Pattern setting mode, the following items are set:

Step SV, Step time, PID block number, Number of repetitions, pattern link

Settings are performed for the pattern selected at the time of entering Pattern setting mode.
During program control RUN, settings are possible only for the currently performing pattern.
If 'Pattern link Enabled' is selected in [Pattern link]: Even if the performing pattern is changed from 1 to 2 during pattern setting mode, Pattern 1 will be remained, and the pattern number will not be updated until the unit reverts to RUN mode.

### • Before entering Pattern setting mode

Select a pattern number with the PTN key before entering Pattern setting mode.

### • To enter Pattern setting mode

In RUN mode, press the MODE key. The unit enters Pattern setting mode.

Pattern 1 is used for the explanation of setting items in Pattern setting mode.

| Characters, Factory Default | Setting Item, Function, Setting Range |
|---|---|
| ┌ ε ┌ Ρ 1 0000 <br> PTN/STEP indicator 1 lights up. | **Step 1 SV** <br> • Sets Step 1 SV. <br>   Step SV is a value (SV) at the end of the step. <br> • Setting range: <br>   Scaling low limit to Scaling high limit |
| ┌ ι ┌ ε 1 00:00 <br> PTN/STEP indicator 1 lights up. | **Step 1 time** <br> • Sets Step 1 time. <br>   Step time is the processing time of the step. <br> • Setting range: <br>   – – – –, 00:00 to 99.59 (Time unit follows the selection in [Step time unit].) <br>   If the ∨ key is pressed at 00:00, – – – – will appear. <br>   If – – – – is set, Fixed value control will be performed using Step 1 SV. |
| _ Ρ ι ∂ 1 0001 <br> PTN/STEP indicator 1 lights up. | **Step 1 PID block number** <br> • Selects PID block number used for Step 1. <br> • Selection item: <br>   1 to 10 |

At this stage, settings for Pattern setting mode are complete.

Press the RST key. The unit reverts to RUN mode.

## 8.2 Setting Items in Event Setting Mode

Setting items in Event Setting Mode differs depending on the selection in [Event output EV□ allocation].
If 001 (High limit alarm) to 012 (High/Low limits alarm with standby independent alarm) are selected in [Event output EV□ allocation], EV□ alarm value will be set.
If 015 (Time signal output) is selected in [Event output EV□ allocation], TS□ output OFF time and TS□ output ON time can be set.

Settings are performed for the pattern number selected at the time of entering Event setting mode.
Setting values are common to all steps in each pattern.

During program control RUN, only the performing pattern can be set.
If 'Pattern link Enabled' is selected in [Pattern link]: Even if the performing pattern is changed from 1 to 2 during Event setting mode, Pattern 1 will be remained, and pattern number will not be updated until the unit reverts to RUN mode.
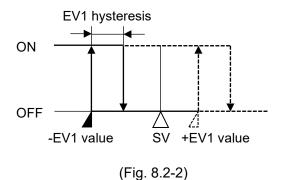

**• Alarm output**

EV1 alarm output actions are shown below.
EV1 alarm output will be substituted by EV2 or EV3 alarm output.

**• High limit alarm**

(Fig. 8.2-1)

**• Low limit alarm**

(Fig. 8.2-2)

**• High/Low limits alarm**

(Fig. 8.2-3)

**• High/Low limits independent alarm**

(Fig. 8.2-4)

• **High/Low limit range alarm**

EV1 hysteresis

OFF

EV1 low limit value    SV    EV1 high limit value

Alarm output is in standby.

(Fig. 8.2-12)

• **Time signal output**
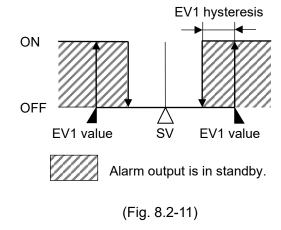

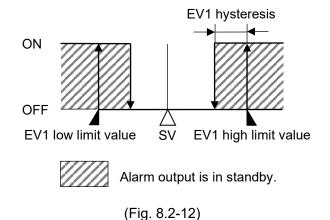

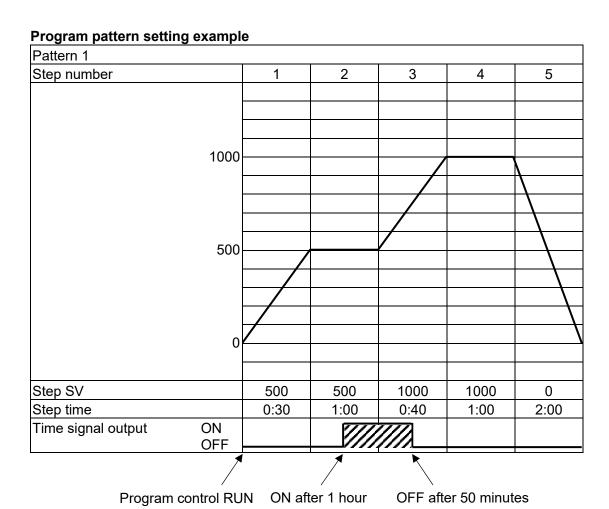

Time signal output OFF time and Time signal output ON time are set within one pattern total time.

After program control starts, Time signal output activates during Time signal output ON time after Time signal output OFF time has elapsed.

During Wait action or program control HOLD, progress time of Time signal output stops.

When Step time is changed during program control RUN, Time signal output timing is re-calculated using the pattern time after change.

**Program pattern setting example**

| Pattern 1 | | | | | | |
|---|---|---|---|---|---|---|
| Step number | | 1 | 2 | 3 | 4 | 5 |
| | | | | | | |
| Step SV | | 500 | 500 | 1000 | 1000 | 0 |
| Step time | | 0:30 | 1:00 | 0:40 | 1:00 | 2:00 |
| Time signal output | ON / OFF | | | | | |

Program control RUN      ON after 1 hour      OFF after 50 minutes

(e.g.) Time signal output setting
    Time signal output OFF time: 1 hour
    Time signal output ON time: 50 minutes

(Fig. 8.2-13)

**Explanation of Time signal output**

In the above program pattern example, Time signal output turns ON one hour after program control RUN starts (30 minutes after the unit entered Step 2). Time signal output turns OFF 50 minutes after Time signal output turned ON (20 minutes after the unit entered Step 3).

**• Before entering Event setting mode**

Select a pattern number with the PTN key before entering Event setting mode.

**• How to enter Event setting mode**

In RUN mode, press the MODE key for approx. 3 seconds to enter Event setting mode.

Setting items in Event Setting mode are shown below.

| Characters, Factory Default | Setting Item, Function, Setting Range |
|---|---|
| ⌑ ¦⌑⌑<br>¦ ⌑⌑⌑⌑ | **EV1 alarm value**<br>• Sets EV1 alarm value.<br>  EV1 alarm value matches EV1 low limit alarm value in the following cases:<br>   When 004 (High/Low limits independent alarm), 006 (High/Low limit range<br>   independent alarm) or 012 (High/Low limits with standby independent alarm)<br>   is selected in [Event output EV1 allocation].<br>• Setting range:<br>  High limit alarm:                              -(Input span) to Input span (*1)<br>  Low limit alarm:                              -(Input span) to Input span (*1)<br>  High/Low limits alarm:                  0 to Input span (*1)<br>  High/Low limits independent alarm:      0 to Input span (*1)<br>  High/Low limit range alarm:              0 to Input span (*1)<br>  High/Low limit range independent alarm: 0 to Input span (*1)<br>  Process high alarm:        Input range low limit to Input range high limit (*2)<br>  Process low alarm:         Input range low limit to Input range high limit (*2)<br>  High limit with standby alarm:              -(Input span) to Input span (*1)<br>  Low limit with standby alarm:              -(Input span) to Input span (*1)<br>  High/Low limits with standby alarm:          0 to Input span (*1)<br>  High/Low limits with standby independent alarm: 0 to Input span (*1)<br>  (*1) For DC voltage, current inputs, the input span is the same as the scaling span. At this stage, settings for Event setting mode are complete.

Press the RST key. The unit reverts to RUN mode.

### 8.3 Setting Items in Control Parameter Setting Mode

In Control parameter setting mode, the following setting items can be set:

AT Perform/Cancel, OUT1 proportional band, Integral time, derivative time, ARW, OUT2 proportional

band (when EV2, DS, DA or EV3D☐ option is ordered), Direct/Reverse action, Loop break alarm, etc.

Setting data is common to all patterns.

**• How to enter Control parameter setting mode**

In RUN mode, press the ⟨∧⟩ and ⟨MODE⟩ keys (in that order) together. The unit enters Control
parameter setting mode.

Setting items in Control parameter setting mode are shown below.

| Characters, Factory Default | Setting Item, Function, Setting Range |
|---|---|
| AT ☐☐ <br> ☐ – – – – | **AT Perform/Cancel** <br> • Selects AT (auto-tuning) Perform/Cancel. <br>  AT will work only during program control RUN. <br>  After AT starts, and if AT has not been completed within 4 hours, or if input <br>  errors have occurred, $Er20$ will be indicated on the PV Display, and AT will <br>  be forced to stop. <br> • Selection item: <br><br>     – – – –   \| AT Cancel <br>     AT ☐☐   \| AT Perform |
| PbLt <br> ☐ ☐☐☐1 | **PID block number** <br> • Selects a PID block number from 1 to 10 for the following settings: <br>     OUT1 proportional band, Integral time, Derivative time, ARW, <br>     OUT2 proportional band [EV2(DR), DS, DA, EV3D☐ options] <br>  Refer to recommended usage of block numbers as follows: <br>     Block 1: For Fixed value control <br>     Block 2: For low temperature program control <br>     Block 3: For medium temperature program control <br>     Block 4: For high temperature program control <br> • Selection item: <br>     1 to 10 |

At this stage, settings for Control parameter setting mode are complete.

Press the RST key. The unit reverts to RUN mode.

## 8.4  Setting Items in Wait Parameter Setting Mode

In Wait parameter setting mode, the following setting items can be set:

Wait value, Wait function Enabled/Disabled for each step

Settings are performed for the pattern number selected at the time of entering Wait parameter setting mode.

During program control RUN, only the performing pattern can be set.

If 'Pattern link Enabled' is selected in [Pattern link]: Even if the performing pattern is changed from 1 to 2 during Wait parameter setting mode, Pattern 1 will remain, and the pattern number will not be updated until the unit reverts to RUN mode.

### • Wait function
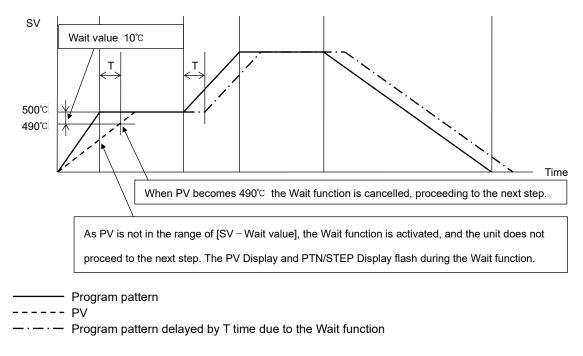

During program control RUN, the program does not proceed to the next step until the deviation between PV and SV enters SV±Wait value at the end of step.

The PV Display and PTN/STEP Display flash while the Wait function is activated.
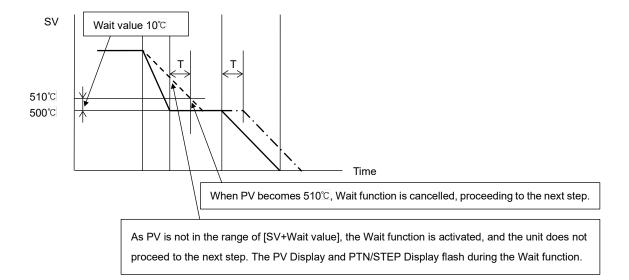

### • Explanation of Wait Function

#### • Program pattern rising step:

Wait value 10℃

500℃
490℃

When PV becomes 490℃ the Wait function is cancelled, proceeding to the next step.

As PV is not in the range of [SV−Wait value], the Wait function is activated, and the unit does not proceed to the next step. The PV Display and PTN/STEP Display flash during the Wait function.

——————— Program pattern
- - - - - - PV
—・—・— Program pattern delayed by T time due to the Wait function

(Fig. 8.4-1)

**• Program pattern falling step:**

Program pattern
PV
Program pattern delayed by T time due to the Wait function

(Fig. 8.4-2)

**・How to cancel the Wait function**

Press the RUN key for approx. 1 second to cancel the Wait function.

**・Before entering Wait parameter setting mode**

Select a pattern number with the PTN key before entering Wait parameter setting mode.

**・How to enter Wait parameter setting mode**

In RUN mode, press the ⌃ and ⌄ keys (in that order) together for approx. 3 seconds.
The unit enters Wait parameter setting mode.

Setting items in Wait parameter setting mode are shown below.

| Characters, Factory Default | Setting Item, Function, Setting Range |
|---|---|
| ⎍Я1 Γ<br>1 ▯▯▯0 | **Wait value**<br>• Sets the Wait value.<br>  Wait value is common to all steps for each pattern.<br>  When set to 0 or 0.0, the Wait function is disabled.<br>• Setting range: 0 to 20% of input span (*)<br>  (*) DC voltage, current inputs: 0 to 20% of scaling span (The placement of the decimal point follows the selection.) |

At this stage, settings for Wait parameter setting mode are complete.

Press the RST key. The unit reverts to RUN mode.

### 8.5 Setting Items in Engeering Setting Mode 1

In Engeering setting mode 1, the following setting items can be set:
   Set value lock, Sensor correction, PV filter time constant, Communication parameters (When C5W
   or C5 option is ordered)
Setting data is common to all patterns.

**• How to enter Engineering setting mode 1**
In RUN mode, press the ⬇ and MODE keys (in that order) together for approx. 3 seconds to enter
Engeering setting mode 1.

Setting items in Engeering setting mode 1 are shown below.

| Characters, Factory Default | Setting Item, Function, Setting Range | | | |
|---|---|---|---|---|
| **Lock** <br> ▯ ---- | **Set value lock** <br> • Locks the set values to prevent setting errors. <br>   The setting item to be locked depends on the selection. <br> • Selection item: | | | |
| | | | **Change via Keypad** | **Change via Software Communication** |
| | ---- | Unlock | All set values can be changed. | All set values can be changed. |
| | Loc1 | Lock 1 | Only 'Set value lock' can be changed. Other setting items cannot be changed. | |
| | Loc2 | Lock 2 | Setting items selected in [Changeable in Set value lock] can be changed. 'Set value lock' can be changed. Other setting items cannot be changed. | |
| | Loc3 | Lock 3 | All set values can be changed. | Setting items – except Input type – can be changed temporarily via software communication. However, if power is turned ON again, the set values revert to the values before Lock 3, 4 or 5 was selected. |
| | Loc4 | Lock 4 | Only 'Set value lock' can be changed. Other setting items cannot be changed. | |
| | Loc5 | Lock 5 | Setting items selected in [Changeable in Set value lock] can be changed. 'Set value lock' can be changed. Other setting items cannot be changed. | |
| **LoSE** <br> ▯ S800 | **Changeable in Set value lock** <br> • When Loc2 (Lock 2) or Loc5 (Lock 5) is selected in [Set value lock], the <br>   following items can be changed. <br> • Selection item: | | | |
| | S800 | | Step SV and Step time can be changed. | |
| | S8E8 | | Step SV, Step time and EV▯ alarm value can be changed. | |

| Characters, Factory Default | Setting Item, Function, Setting Range |
|---|---|
| 5ot0<br>0 1000 | **Sensor correction coefficient**<br>• Sets sensor correction coefficient.<br>  Sets slope of input value from a sensor.<br><br>(graph)<br><br>750℃, 700℃, Y, Y'<br>Corrected from 750℃ to 700℃.<br>340℃, X', 300℃, X<br>Corrected from 300℃ to 340℃.<br>300℃   750℃<br>- - - - ·  Slope before correction<br>────  Slope after correction<br><br>$$\frac{Y'-X'}{Y-X} = \text{Sensor correction coefficient}$$<br><br>(Fig. 8.5-1)<br><br>PV after sensor correction= Current PV x (Sensor correction coefficient) + (Sensor correction value)<br>Refer to Section '9.5 Input Value Correction' (pp.107, 108).<br>• Setting range:<br>  -10.000 to 10.000 |
| 5o00<br>0 0000 | **Sensor correction**<br>• This corrects the input value from the sensor.<br>  When a sensor cannot be set at the exact location where control is desired, the sensor-measured temperature may deviate from the temperature in the controlled location. When using multiple controllers, sometimes the measured temperatures do not concur due to differences in sensor accuracy or dispersion of load capacities. In such a case, the control can be set at the desired temperature by adjusting the input value of sensors. However, it's only effective within the input rating range regardless of the sensor correction value.<br>PV after sensor correction= Current PV x (Sensor correction coefficient) + (Sensor correction value)<br>Refer to Section '9.5 Input Value Correction' (pp.107, 108).<br>• Setting range: -1000.0 to 1000.0℃ (℉)<br>  DC voltage, current inputs: -10000 to 10000 (The placement of the decimal point follows the selection.) |

| Characters, Factory Default | Setting Item, Function, Setting Range |
|---|---|
| FILT<br>0000.0 | **PV filter time constant**<br>• Sets PV filter time constant.<br> If the value is set too high, it affects control results due to the delay of response.<br>**About PV filter time constant:**<br> This is a filter function on the software, which has the same effect as a CR filter. By calculating first-order lag of PV, this suppresses input fluctuation caused by noise.<br> When the input value changes as shown in (Fig. 8.5-2), this function makes the input change slow as shown in (Fig. 8.5-3).<br> T (PV filter time constant) is the time when input change reaches 63% of the desired PV.<br><br>(Fig. 8.5-2)<br><br>100%<br>63%<br>T<br>(Fig. 8.5-3)<br><br>• Setting range: 0.0 to 10.0 seconds |
| cmSL<br>nomL | **Communication protocol**<br>• Selects communication protocol.<br>• Selection item:<br><table><tr><td>nomL</td><td>Shinko protocol</td></tr><tr><td>SdT0</td><td>SV digital transmission (Shinko protocol)</td></tr><tr><td>SdTr</td><td>SV digital reception (Shinko protocol)</td></tr><tr><td>modA</td><td>Modbus ASCII mode</td></tr><tr><td>modr</td><td>Modbus RTU mode</td></tr></table>Available when C5W or C5 option is ordered. |
| cmno<br>0000 | **Instrument number**<br>• Sets the instrument number.<br> The instrument numbers should be set one by one when multiple instruments are connected in Serial communication, otherwise communication is impossible.<br>• Setting range: 0 to 95<br>Available when C5W or C5 option is ordered. |

| Characters, Factory Default | Setting Item, Function, Setting Range | |
|---|---|---|
| cm5P 0 0096 | **Communication speed** • Selects a communication speed equal to that of the host computer. • Selection item: | |
| | 0096 | 9600 bps |
| | 0192 | 19200 bps |
| | 0384 | 38400 bps |
| | Available when C5W or C5 option is ordered. | |
| cmFr 0 7EUn | **Data bit/Parity** • Selects data bit and parity equal to those of the host computer. • Selection item: | |
| | 8non | 8 bits/No parity |
| | 7non | 7 bits/No parity |
| | 8EUn | 8 bits/Even |
| | 7EUn | 7 bits/Even |
| | 8odd | 8 bits/Odd |
| | 7odd | 7 bits/Odd |
| | Available when C5W or C5 option is ordered. | |
| cm5r 0 0001 | **Stop bit** • Selects the stop bit equal to that of the host computer. • Selection item: | |
| | 0001 | 1 bit |
| | 0002 | 2 bits |
| | Available when C5W or C5 option is ordered. | |
| cmdY 0 0010 | **Response delay time** • Response from the controller can be delayed after receiving command from the host computer. If Response delay time is changed via software communication, the changed delay time will be reflected from that response data. • Setting range: 0 to 1000 ms Available when C5W or C5 option is ordered. | |
| 5U_b 0 0000 | **SVTC bias** • SV adds SVTC bias value to the value received by the SVTC command. • Setting range: ±20% of input span DC voltage, current inputs: ±20% of scaling span (The placement of the decimal point follows the selection.) Available when C5W, C5 option is ordered, and when 5Ur [SV digital reception (Shinko protocol)] is selected in [Communication protocol]. | |

At this stage, settings for Engineering setting mode 1 are complete.

Press the RST key. The unit reverts to RUN mode.

### 8.6  Setting Items in Engineering Setting Mode 2

In Engeering setting mode 2, the following setting items can be set:

Input type, Scaling high limit, Scaling low limit, Event output EV☐ allocation, Step time unit,

Power restore action, etc.

Setting data is common to all patterns.

**• How to enter Engineering setting mode 2**

In RUN mode, press the ⌃, ⌄ and MODE keys (in that order) together for approx. 3 seconds

to enter Engeering setting mode 2.

Setting items in Engeering setting mode 2 are shown below.

| Characters, Factory Default | Setting Item, Function, Setting Range |
|---|---|
| 5En5 ☐ t☐☐C | **Input type** <br> • Selects an input type from thermocouple (10 types), RTD (2 types), direct current (2 types) and DC voltage (4 type), and the unit ℃/℉. <br> • **When changing the input from DC voltage to other inputs, remove the sensor connected to this controller first, then change the input. If the input is changed with the sensor connected, the input circuit may break.** <br> • When changing an input type, refer to Section "9.6 Items to be Initialized by Changing Settings" (p.109). <br> • Selection item: |

| | | |
|---|---|---|
| t☐☐C | K | -200 to 1370 ℃ |
| t☐☐C | K | -200.0 to 400.0 ℃ |
| J☐☐C | J | -200 to 1000 ℃ |
| r☐☐C | R | 0 to 1760 ℃ |
| 5☐☐C | S | 0 to 1760 ℃ |
| b☐☐C | B | 0 to 1820 ℃ |
| E☐☐C | E | -200 to 800 ℃ |
| r☐☐C | T | -200.0 to 400.0 ℃ |

**E⊔I 1**
⊔ ⊔000

**Event input DI1 allocation**

• Selects Event input DI1 from the table below.

• Selection item:

| | Event Input Function | Input ON (Closed) | Input OFF (Open) |
|---|---|---|---|
| ⊔000 | No event | | |
| ⊔001 | Pattern number selection | Refer to "About Event input". | |
| ⊔002 | Direct/Reverse action | Direct action | Reverse action |
| ⊔003 | Program control RUN/STOP | RUN | STOP |
| ⊔004 | Program control Holding/Not holding | Holding | Not holding |
| ⊔005 | Program control Advance function | Advance function | Usual control |

Available when C5W, EIW, EIT, C5 or EI option is ordered.

• **About Event input:**

Signal edge action from OFF to ON / ON to OFF is engaged. When power is turned ON, level action is engaged except ⊔005 (Program control Advance function).

If the same item – except ⊔001 (Pattern number selection) – is selected in [Event input DI1 allocation] and [Event input DI2 allocation], OR calculation [if any one is ON (Closed), the function activates] will begin.

An action changed by Event input DI☐ has priority.

If ⊔001 (Pattern number selection) is selected, Patterns 1 to 4 can be selected by ON (Closed) or OFF (Open) status of Event input DI1 and DI2. Pattern numbers selected by Event input have priority over pattern numbers selected by keypad operation.

To select pattern numbers by keypad operation, make sure all Event inputs are in OFF (Open) status.

**When ⊔001 (Pattern number selection) is selected only in [Event input DI1 allocation]**

| Pattern number | * | 2 |
|---|---|---|
| Event input DI1 | OFF(Open) | ON(Closed) |

\* This number will be selected by keypad.

**When ⊔001 (Pattern number selection) is selected only in [Event input DI2 allocation]**

| Pattern number | * | 2 |
|---|---|---|
| Event input DI2 | OFF(Open) | ON(Closed) |

\* This number will be selected by keypad.

**When ⊔001 (Pattern number selection) is selected in [Event input DI1 allocation] and [Event input DI2 allocation]**

| Pattern number | * | 2 | 3 | 4 |
|---|---|---|---|---|
| Event input DI1 | OFF(Open) | ON(Closed) | OFF(Open) | ON(Closed) |
| Event input DI2 | OFF(Open) | OFF(Open) | ON(Closed) | ON(Closed) |

\* This number will be selected by keypad.

At this stage, settings for Engineering setting mode 2 are complete.

Press the RST key. The unit reverts to RUN mode.

## 8.7   Clearing Data

If data is cleared, all data will revert to factory default values.

Data can be cleared only in program control STOP (in Standby).

Data cannot be cleared during program control RUN.

---

## ⚠ Caution

**Once data clear is executed, initial settings and each setting should be set again.**

**(Cleared data cannot be restored.)**

**In preparation for mistaken execution of data clear, please write down initial settings and other setting data in the data sheets at the end of this manual.**

---

**• To execute data clear**

In RUN mode, and while in program control STOP (in Standby), if the ⌃ , ⌄ and STOP keys (in that order) together are pressed for approx. 3 seconds, the unit enters [Data clear Yes/No].

# 9. Operation

## 9.1 Performing Program Control

### 9.1.1 Performing Program Control

#### (1) Before turning the power ON

Check Sections "3. Mounting to the Control Panel (pp.12 - 15)" and "4. Wiring (pp.16 - 25)" before turning the power ON.

#### (2) After turning the power ON

Set necessary setting items after turning the power ON.
Refer to Sections "5. Outline of Key Operation and Each Mode (pp.26 - 28)", "6. Initial Settings (pp. 29 - 37)", "7. Basic Settings and Operation (pp.38 - 43)" and "8. Explanation of Setting Items" (pp.44 - 90).

#### (3) Selecting a pattern number

There are 2 methods for selecting a pattern number:
Using the PTN key, or using Event input
Pattern numbers selected by Event input have priority over pattern numbers selected by the keypad.
To select pattern numbers by keypad, make sure all Event inputs are in OFF (Open) status.

- **Using the PTN key**

  In program control STOP (in Standby), select a pattern from 1 – 10 with the PTN key.

- **Using Event input**

  If ⊡⊡⊡⊣ (Pattern number selection) is selected in [Event input DI1 allocation] and [Event input DI2 allocation]:
  Select a pattern from 2 – 4, depending on ON (Closed) or OFF (Open) status between Event input DI1/DI2 terminal and SG terminal.
  Select pattern 1 or a pattern from 5 – 10 with the PTN key.

  Signal edge action is engaged. However, when power is turned ON, level action is engaged.

  If ⊡⊡⊡⊣ (Pattern number selection) is selected only in [Event input DI1 allocation]:
  (e.g.) To select Pattern 2, close (ON) ⑨ and ⑫.

  (Table 9.1.1-1)

| Pattern number / Terminal number | * | 2 |
|---|---|---|
| ⑨ Event input DI1 | OFF (Open) | ON (Closed) |

  * This number will be selected by keypad.

  If ⊡⊡⊡⊣ (Pattern number selection) is selected only in [Event input DI2 allocation]:
  (e.g.) To select Pattern 2, close (ON) ⑧ and ⑫.

  (Table 9.1.1-2)

| Pattern number / Terminal number | * | 2 |
|---|---|---|
| ⑧ Event input DI2 | OFF (Open) | ON (Closed) |

  * This number will be selected by keypad.

If ◻◻◻1 (Pattern number selection) is selected in [Event input DI1 allocation] and [Event input DI2 allocation]:

(e.g.) To select Pattern 4, close (ON) ⑨ and ⑫, and close (ON) ⑧ and ⑫.

(Table 9.1.1-3)

| Pattern number<br>Terminal number | * | 2 | 3 | 4 |
|---|---|---|---|---|
| ⑨ Event input DI1 | OFF (Open) | ON (Closed) | OFF (Open) | ON (Closed) |
| ⑧ Event input DI2 | OFF (Open) | OFF (Open) | ON (Closed) | ON (Closed) |

* This number will be selected by keypad.

## (4) Perform Program Control

There are 2 ways to start program control.

Using the RUN key, or using Event input.

### • Using the RUN key
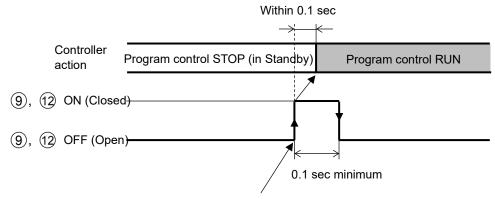

In program control STOP (in Standby), press the RUN key.
Program control starts.

### • Using Event input

If ◻◻◻3 (Program control RUN/STOP) is selected in [Event input DI◻ allocation],
Program control RUN/STOP can be switched, depending on ON (Closed) or OFF (Open)
status between Event input DI1 / DI2 terminal and SG terminal.

If ◻◻◻3 (Program control RUN/STOP) is selected in [Event input DI1 allocation],
close (ON) ⑨ and ⑫.
Program control will start.

Program control performs by detecting rising signal edge action
from OFF (Open) to ON (Closed) of terminals ⑨ and ⑫.

(Fig. 9.1.1-1)

**[Program control start type]**
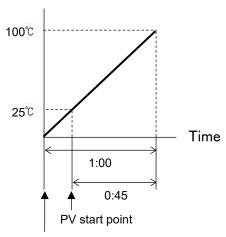

Program control start type can be selected in [Program control start type].

**PV start:**

Only when program control starts, step SV and step time are advanced to the PV, then program control starts.

However, if step SV set in [Step SV when program control starts] is higher than the PV (when PV start is initiated), then program control will start from the SV set in [Step SV when program control starts].

When program control starts,
step SV is advanced to PV (25℃).

(Fig. 9.1.1-2)
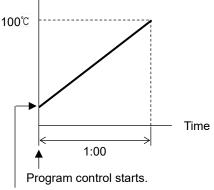

**PVR start:**

When program control starts and in pattern repeating, the step SV and step time are advanced to the PV, then the program control starts.

Action is the same as that of PV start. Refer to (Fig. 9.1.1-2).

**SV start:**

Program control starts from the value set in [Step SV when program control starts].

Program control starts from the value set
in [Step SV when program control starts].

(Fig. 9.1.1-3)

**[Power Restore Action]**

 If power fails during program control RUN, the controller can be operated depending on the
 selection in [Power restore action].
 Progressing time error when power is restored: 1 minute or 1 second

   • Stops after power is restored:
       After power is restored, stops current program control, and returns to program control STOP
       (in Standby) status.

   • Continues after power is restored:
       After power is restored, continues (resumes) program control.

   • Suspends after power is restored:
       After power is restored, suspends (on hold) current program, and performs Fixed value
       control using the step SV at the time of suspension.
       Pressing the RUN key cancels suspension, and program control resumes.
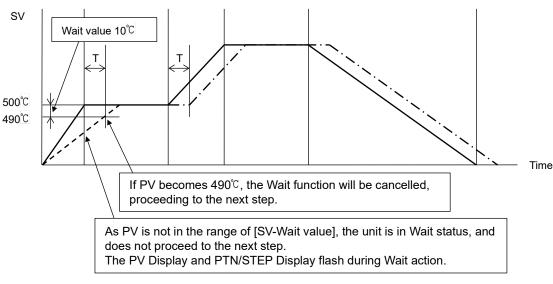

**[Wait function]**

While program control is running, the program does not proceed to the next step until the deviation between PV and SV enters SV±Wait value at the end of step. The PV Display and PTN/STEP Display flash while the Wait function is working.
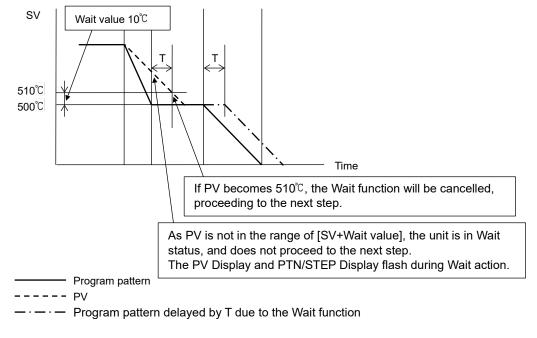

**Explanation of Wait function**
**• When program pattern is rising:**

Wait value 10℃

T

T

500℃
490℃

Time

If PV becomes 490℃, the Wait function will be cancelled, proceeding to the next step.

As PV is not in the range of [SV-Wait value], the unit is in Wait status, and does not proceed to the next step.
The PV Display and PTN/STEP Display flash during Wait action.

(Fig. 9.1.1-4)

**• When program pattern is falling:**

Wait value 10℃

T

T

510℃
500℃

Time

If PV becomes 510℃, the Wait function will be cancelled, proceeding to the next step.

As PV is not in the range of [SV+Wait value], the unit is in Wait status, and does not proceed to the next step.
The PV Display and PTN/STEP Display flash during Wait action.

————— Program pattern
- - - - - - PV
—·—·— Program pattern delayed by T due to the Wait function

(Fig. 9.1.1-5)

**• How to cancel the Wait function**

Press the RUN key for approx. 1 second to cancel the Wait function.

The Wait function can also be cancelled by selecting $\square CC5$ (Program control ADVANCE function) in [Event input DI□ allocation], and closing (ON) any terminal of Event input DI□ and SG terminal.

### 9.1.2 Stopping Program Control

There are 2 methods for stopping program control:
Using the STOP key, or using Event input

**• Using the STOP key**

Press the STOP key for approximately 1 second during Program control RUN.
Program control will stop, and revert to program control STOP (in Standby) status.
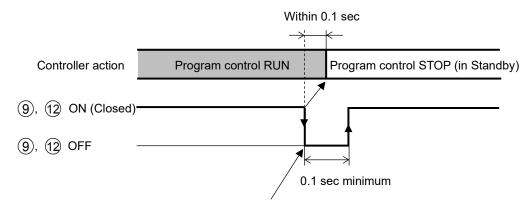

**• Using Event input**

If ▯003 (Program control RUN/STOP) is selected in [Event input DI▯ allocation],
Program control RUN/STOP can be switched, depending on ON (Closed) or OFF (Open) status
between Event input DI▯ terminal and SG terminal.

If ▯003 (Program control RUN/STOP) is selected in [Event input DI1 allocation],
open (OFF) ⑨ and ⑫.
Program control will stop, and the unit will revert to program control STOP (in Standby) status.

Program control stops by detecting falling signal edge action from
ON to OFF of terminals ⑨ and ⑫.

(Fig. 9.1.2-1)

### 9.1.3 Suspending Program Control (Program Control HOLD Function)

During program control, progress of current step can be suspended (paused).

Fixed value control is performed using the step SV at the time of suspension.

Pressing the RUN key cancels suspension, and program control resumes.

To suspend program control, there are 2 methods:

Using the ⌃ key, or using Event input

**• Using the ⌃ key**

During program control RUN, press the ⌃ key for approx. 1 second.

Progress of current step is suspended, and then Fixed value control is performed using the step SV at the time of suspension.

The PV Display and RUN indicator flash.

**• Using Event input**
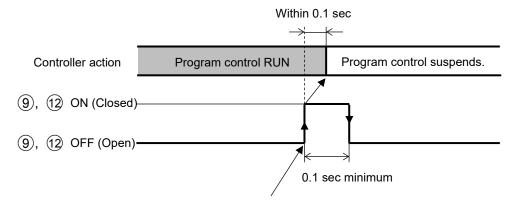

If ⬚004 (Program control Holding/Not holding) is selected in [Event input DI⬚ allocation], Program control Holding/Not holding can be switched, depending on ON (Closed) or OFF (Open) status between Event input DI⬚ terminal and SG terminal.

If ⬚004 (Program control Holding/Not holding) is selected in [Event input DI1 allocation], close (ON) ⑨ and ⑫.

Progress of current step is suspended, and then Fixed value control is performed using the step SV at the time of suspension.

The PV Display and RUN indicator flash.

(Fig. 9.1.3-1)

### 9.1.4 Advancing Program Step (Advance Function)

Interrupts current step while program control is running, and proceeds to the beginning of the next step.

If the Wait function is working, the Wait function will be cancelled, and will proceed to the beginning of the next step.

To advance program step, there are 2 methods:

Using the RUN key, or using Event input

**• Using the RUN key**

During program control RUN, press the RUN key for approx. 1 second.

Current step is stopped, and the unit proceeds to the beginning of the next step.
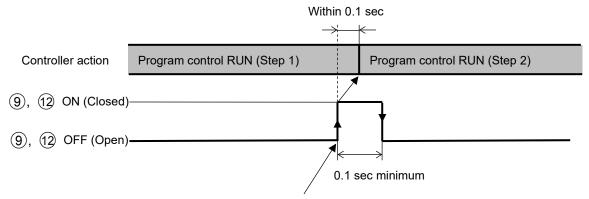

Each time the RUN key is pressed for approx. 1 second, the unit proceeds to the next step.

**• Using Event input**

If $\square$005 (Program control Advance function) is selected in [Event input DI$\square$ allocation], Program control Advance or usual control can be switched, depending on ON (Closed) or OFF (Open) status between Event input DI$\square$ terminal and SG terminal.

If $\square$005 (Program control Advance function) is selected in [Event input DI1 allocation], close (ON) ⑨ and ⑫.

Current step is stopped, and the unit proceeds to the beginning of the next step.

Each time terminals ⑨ and ⑫ are turned from OFF (Open) to ON (Closed), the unit proceeds to the next step.

(Fig. 9.1.4-1)

### 9.1.5 Speeding up Program Step Time (Step Time Speed-up Function)
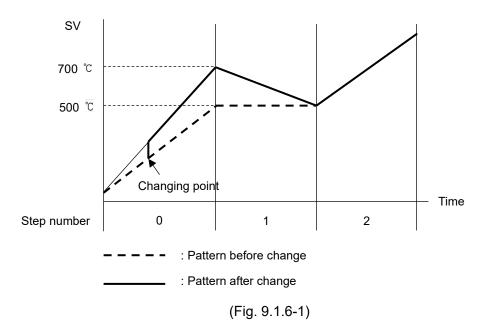

To make program step time progress faster, press the FAST key during program control RUN.

While the FAST key is pressed, the step time progress is made 60 times faster.

If the Wait function is set, this function will be disabled as the Wait function has priority.
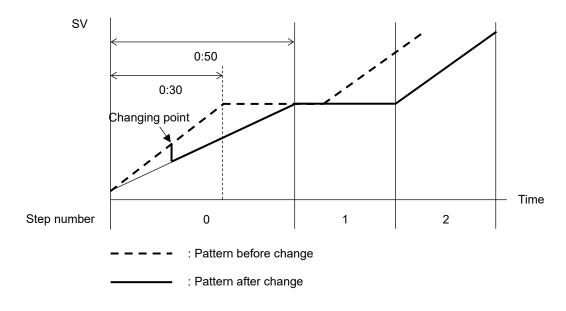

### 9.1.6 Changing Program Step SV and Step Time

When step SV and step time are changed during program control RUN, they will change as follows.

**• When changing step SV from 500 to 700℃**

(Fig. 9.1.6-1)

**• When changing step time from 0:30 to 0:50**

(Fig. 9.1.6-2)

### 9.1.7 Ending Program (Pattern End Function)

If ⬚0 17 (Pattern end output) is selected in [Event output EV⬚ allocation], Pattern end output is turned ON after program control is finished, and the SV Display flashes PEnd.

By pressing the STOP key for approximately 1 second, Pattern end output is turned OFF, and the unit returns to program control STOP (in Standby).

If Pattern end output time is set, Pattern end output is automatically turned OFF after Pattern end output time has expired. And the unit returns to program control STOP (in Standby).

## 9.2   Performing Fixed Value Control

### 9.2.1   Performing Fixed Value Control

Fixed value control (control action that indicating controllers are performing) is performed using the preset step SV.

To perform Fixed value control, set the step time (of the desired step SV) to − − − −.

(e.g.) Set Pattern 1, Step 1 SV to 500℃, and set its step time to − − − −.
　　　Press the RUN key. Fixed value control is performed at 500℃.

#### (1) Before turning the power ON

Check Sections "3. Mounting to the Control Panel (pp.12 - 15)" and "4. Wiring (pp.16 - 25)" before turning the power ON.

#### (2) After turning the power ON

Set necessary items after turning the power ON.
Refer to Sections "5. Outline of Key Operation and Explanation of Each Mode (pp.26 - 28)",
"6. Initial Settings (pp.29 - 37)", "7. Basic Settings and Operation (pp.38 - 43)" and "8. Explanation of Setting Items (pp.44 - 90)".

To perform Fixed value control. set the step SV and step time for the desired pattern.
To set the step time, press the ⌄ key at 00:00. − − − − will be selected.
Select a PID block number.

#### (3) Selecting a pattern number to perform

There are 2 methods for selecting a pattern number:
　　Using the PTN key, or using Event input

Pattern numbers selected by Event input have priority over pattern numbers selected by the PTN key.
To select pattern numbers by keypad, make sure all Event inputs are in OFF (Open) status.

**• Using the PTN key**

In program control STOP (in Standby), select a pattern (from 1 – 10) for which step time is set to − − − − at (2), using the PTN key.

**• Using Event input**

If ⌷⌷⌷⌷ (Pattern number selection) is selected in [Event input DI☐ allocation],
select a pattern from 2 – 4, depending on ON (Closed) or OFF (Open) status between Event input DI1 / DI2 terminal and SG terminal.

To select Pattern 1 or a pattern from 5 – 10, press the PTN key.

Edge action is used. However, when power is turned ON, level action is engaged.

If ⌷⌷⌷⌷ (Pattern number selection) is selected only in [Event input DI1 allocation],
(e.g.) To select Pattern 2, close (ON) ⑨ and ⑫.

(Table 9.2.1-1)

| Pattern number Terminal number | * | 2 |
|---|---|---|
| ⑨ Event input  DI1 | OFF (Open) | ON (Closed) |

* This number will be selected by keypad.

If 🔲00 1 (Pattern number selection) is selected only in [Event input DI2 allocation],
(e.g.) To select Pattern 2, close (ON) ⑧ and ⑫.

(Table 9.2.1-2)

| Pattern number / Terminal number | * | 2 |
|---|---|---|
| ⑧ Event input DI2 | OFF (Open) | ON (Closed) |

* This number will be selected by keypad.

If 🔲00 1 (Pattern number selection) is selected in [Event input DI1 allocation] and [Event input DI2 allocation]:
(e.g.) To select Pattern 4, close (ON) ⑨ and ⑫, and close (ON) ⑧ and ⑫.

(Table 9.2.1-3)

| Pattern number / Terminal number | * | 2 | 3 | 4 |
|---|---|---|---|---|
| ⑨ Event input DI1 | OFF (Open) | ON (Closed) | OFF (Open) | ON (Closed) |
| ⑧ Event input DI2 | OFF (Open) | OFF (Open) | ON (Closed) | ON (Closed) |

* This number will be selected by keypad.

## (4) Executing Fixed Value Control

There are 2 ways to execute Fixed value control:
Using the RUN key, or using Event input

**• Using the RUN key.**
In program control STOP (in Standby), press the RUN key.
The step, for which step time is set to − − − − at (2), is held, and Fixed value control is performed using the step SV.
The RUN indicator flashes during Fixed value control.

**• Using Event input**
If 🔲003 (Program control RUN/STOP) is selected in [Event input DI🔲 allocation],
Program control RUN/STOP can be switched, depending on ON (Closed) or OFF (Open) status between Event input DI1 / DI2 terminal and SG terminal.
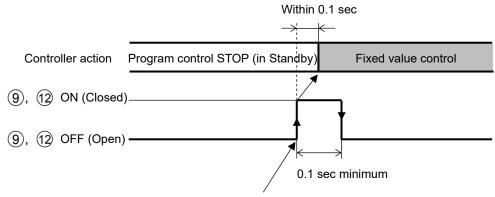

If 🔲003 (Program control RUN/STOP) is selected in [Event input DI🔲 allocation],
close (ON) ⑨ and ⑫.
The step, for which step time is set to − − − − at (2), is held, and Fixed value control is performed using the step SV.
The RUN indicator flashes during Fixed value control.

Fixed value control is performed by detecting rising signal edge
action from OFF (Open) to ON (Closed) of terminals ⑨ and ⑫.

(Fig. 9.2.1-1)

### 9.2.2   Finishing Fixed Value Control

There are 2 ways to finish Fixed value control:
Using the STOP key, or using Event input

**• Using the STOP key**
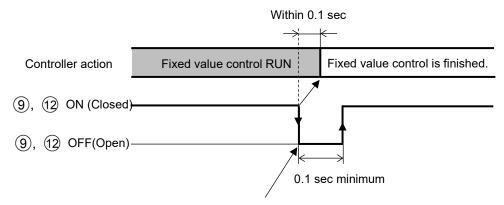

During Fixed value control, press the STOP key for approximately 1 second.
Fixed value control will stop, and the unit will revert to program control STOP (in Standby).

**• Using Event input**

If ❑❑03 (Program control RUN/STOP) is selected in [Event input DI❑ allocation], Program control RUN/STOP can be switched, depending on ON (Closed) or OFF (Open) status between Event input DI❑ terminal and SG terminal.

If ❑❑03 (Program control RUN/STOP) is selected in [Event input DI❑ allocation], open (OFF) ⑨ and ⑫.
Fixed value control will stop, and the unit will return to program control STOP (in Standby).

Within 0.1 sec

| | | |
|---|---|---|
| Controller action | Fixed value control RUN | Fixed value control is finished. |

⑨, ⑫ ON (Closed)

⑨, ⑫ OFF(Open)

0.1 sec minimum
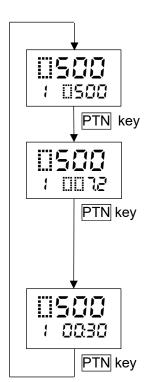

Fixed value control is finished by detecting falling signal edge action from ON (Closed) to OFF (Open) of terminals ⑨ and ⑫.

(Fig. 9.2.2-1)

### 9.3 Switching Indication of the SV Display

Press the PTN key to switch the indication of the SV Display.

Each time the PTN key is pressed, switches the indication as follows.

| | |
|---|---|
| `□500`<br>`1 □500`<br>↓ PTN key | **RUN mode**<br>Step SV is indicated. |
| `□500`<br>`1 □□7.2`<br>↓ PTN key | **Monitor mode**<br>Manipulated variable (MV) is indicated.<br>(e.g.) 7.2% (The decimal point flashes.)<br>When EV2 option (if "`□□20` Heating/Cooling control output" is selected in [Event output EV2 allocation]) is ordered, or when DS, DA or EV3D□ option is ordered, OUT1 MV is a positive number (0.0 to 100.0%), OUT2 MV is a negative number (0.0 to -100.0%). |
| `□500`<br>`1 00:30`<br>↓ PTN key | **Monitor mode**<br>Remaining time is indicated.<br>(e.g.) 00:30 [Colon flashes (in Hours:Minutes or Minutes:Seconds).]<br>For Fixed value control, ‒ ‒ ‒ ‒ is displayed. |

## 9.4 Performing AT

### 9.4.1 Notice when Performing AT
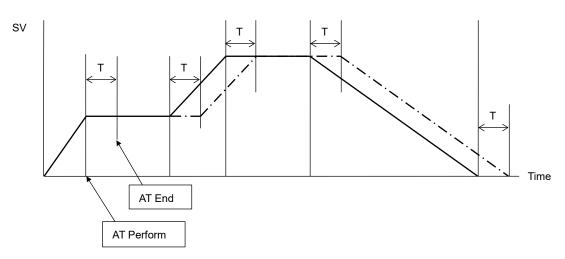

> ## ⚠ Notice
>
> • **Perform the AT during the test operation.**
> • **During the AT, none of the setting items can be set.**
> • **If power failure occurs during AT, AT will stop.**
> • **If AT is cancelled during the process, P, I, D and ARW values will revert to the values before AT was performed.**
> • **AT will be forced to stop if it has not been completed within 4 hours.**
> • **Sometimes the AT process will not fluctuate if AT is performed at or near room temperature. Therefore, AT might not finish normally.**

**[Notice when performing AT during Program control RUN]**

　　　• If AT is performed, AT starts from the AT starting point, and step time does not progress until AT finishes.

　　　After AT finishes, remaining step will be performed.

T: Time delay due to AT

――――― : Program pattern before AT is performed.

― · ― ·· : Program pattern after AT is performed.

(Fig. 9.4.1-1)

### 9.4.2 AT Action
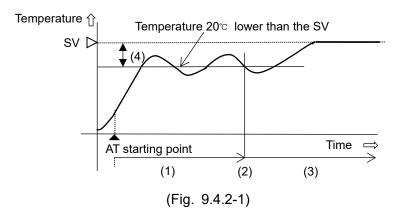

In order to set each value of P, I, D and ARW automatically, the AT process should be made to fluctuate to obtain an optimal value.

For DC voltage, current inputs, the AT process will fluctuate around the SV for conditions of [A], [B] and [C] below.

One of 3 types of fluctuation below is automatically selected depending on the deviation between SV and PV.

**[A] If there is a large difference between the SV and PV as the temperature is rising**
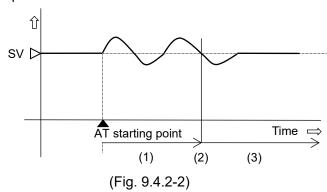

When AT bias is set to 20℃, AT process will fluctuate at the temperature 20℃ lower than the SV.

(1) Calculates PID constants.
(2) PID constants calculated
(3) Controlled by the PID constants set by AT
(4) AT bias value (Factory default: 20℃)

(Fig. 9.4.2-1)

**[B] When the control is stable**
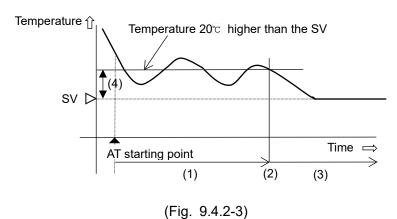

The AT process will fluctuate around the SV.

(1) Calculates PID constants.
(2) PID constants calculated
(3) Controlled by the PID constants set by AT

(Fig. 9.4.2-2)

**[C] If there is a large difference between the SV and PV as the temperature is falling**
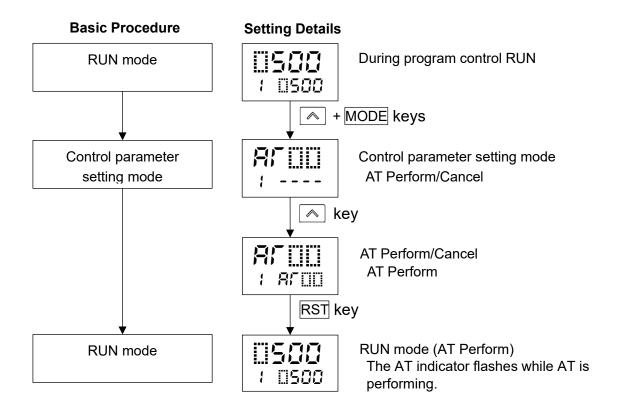

When AT bias is set to 20℃, AT process will fluctuate at the temperature 20℃ higher than the SV.

(1) Calculates PID constants.
(2) PID constants calculated
(3) Controlled by the PID constants set by AT
(4) AT bias value (Factory default: 20℃)

(Fig. 9.4.2-3)

### 9.4.3 Performing AT

To perform AT, select ${\sf A}{\sf r}\ \square\square$ (AT Perform) in [AT Perform/Cancel] in Control parameter setting mode. And press the RST key.

| **Basic Procedure** | **Setting Details** | |
|---|---|---|
| RUN mode | `□500`<br>`1 □500` | During program control RUN |
| | ↓ △ + MODE keys | |
| Control parameter<br>setting mode | `Ar□□`<br>`1 ----` | Control parameter setting mode<br>AT Perform/Cancel |
| | ↓ △ key | |
| | `Ar□□`<br>`1 Ar□□` | AT Perform/Cancel<br>AT Perform |
| | ↓ RST key | |
| RUN mode | `□500`<br>`1 □500` | RUN mode (AT Perform)<br>The AT indicator flashes while AT is performing. |

## 9.5  Input Value Correction

Input value can be corrected in [Sensor correction coefficient] and [Sensor correction] in Engineering setting mode 1.
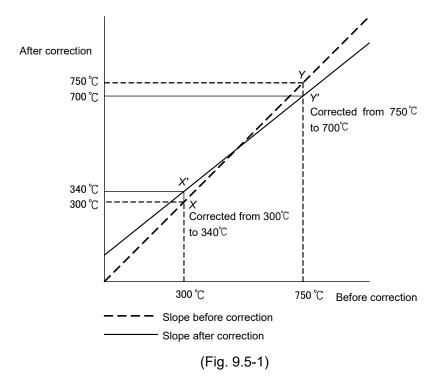

In [Sensor correction coefficient], set the slope of temperature change.

In [Sensor correction], set the difference between temperatures before correction and after correction.

PV after input correction is expressed by the following formula.

PV after input correction = Current PV x Sensor correction coefficient + (Sensor correction value)

The following shows an example of input value correction using 'Sensor correction coefficient' and 'Sensor correction value'.

(Fig. 9.5-1)

(1)  Select any 2 points of PV to be corrected, and determine the PV after correction.
     PV before correction: 300℃  →  PV after correction: 340℃
     PV before correction: 750℃  →  PV after correction: 700℃

(2)  Calculate Sensor correction coefficient from Step (1).
     $(Y' - X') / (Y - X) = (700 - 340) / (750 - 300) = 0.8$

(3)  Enter a PV value of 300℃  using an mV generator or dial resistor.

(4)  Set Step (2) value as a Sensor correction coefficient.

(5)  Read the PV.
     240℃  will be indicated.
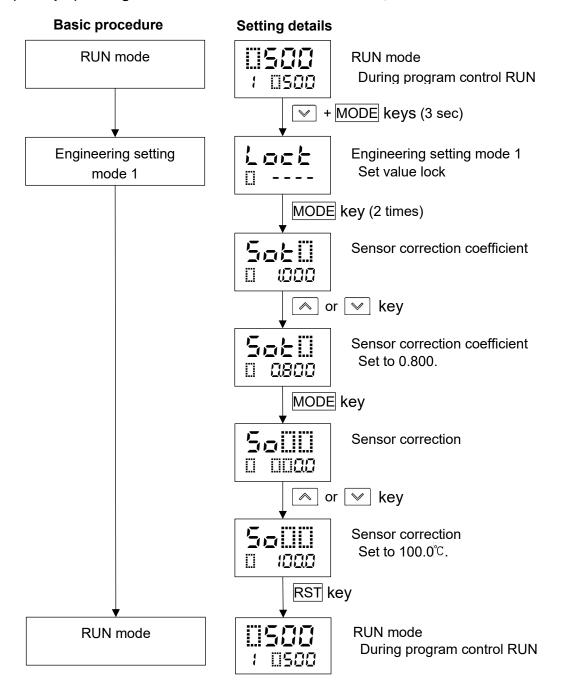

(6)  Calculate the sensor correction value.
     Calculate the difference between 'PV after correction' and Step (5) PV.
     340℃  − 240℃  = 100℃

(7)  Set Step (6) value as a Sensor correction value.

(8)  Enter an electromotive force or resistance value equivalent to 750℃
     using an mV generator or dial resistor.

(9)  Read the PV, and confirm that 700℃  is indicated.

**(Example) Setting Sensor correction coefficient to 0.800, and Sensor correction to 100.0℃**

## 9.6 Items to be Initialized by Changing Settings

If settings are changed, the following items will be initialized.

●: Initialized

x: Not initialized

| Setting item to be changed / Item to be initialized | Input Type | Event output EV1 allocation | Event output EV2 allocation | Event output EV3 allocation | Transmission output |
|---|---|---|---|---|---|
| Loop break alarm time | ● | x | x | x | x |
| Loop break alarm band | ● | x | x | x | x |
| Sensor correction coefficient | ● | x | x | x | x |
| Sensor correction | ● | x | x | x | x |
| SVTC bias | ● | x | x | x | x |
| Scaling high limit | ● | x | x | x | x |
| Scaling low limit | ● | x | x | x | x |
| EV1 alarm value 0 Enabled/Disabled | x | ● | x | x | x |
| EV1 alarm hysteresis | x | ● | x | x | x |
| EV1 alarm delay time | x | ● | x | x | x |
| EV1 alarm Energized/De-energized | x | ● | x | x | x |
| EV2 alarm value 0 Enabled/Disabled | x | x | ● | x | x |
| EV2 alarm hysteresis | x | x | ● | x | x |
| EV2 alarm delay time | x | x | ● | x | x |
| EV2 alarm Energized/De-energized | x | x | ● | x | x |
| EV3 alarm value 0 Enabled/Disabled | x | x | x | ● | x |
| EV3 alarm hysteresis | x | x | x | ● | x |
| EV3 alarm delay time | x | x | x | ● | x |
| EV3 alarm Energized/De-energized | x | x | x | ● | x |
| Transmission output high limit * | ● | x | x | x | ● |
| Transmission output low limit * | ● | x | x | x | ● |
| Step SV when program control starts | ● | x | x | x | x |
| AT bias | ● | x | x | x | x |

* When PV transmission or SV transmission is selected, and if input type is changed, these setting items will be initialized.

# 10. Action Explanation

## 10.1 OUT1 Action

| Action | Reverse (Heating) Action | Direct (Cooling) Action |
|---|---|---|
| Control action | P-band<br>ON —— OFF, slope down to SV | P-band<br>OFF —— ON, slope up from SV |
| Relay contact output | ⑮⑯ (three relay states)<br>Cycle action is performed according to deviation. | ⑮⑯ (three relay states)<br>Cycle action is performed according to deviation. |
| Non-contact voltage output | +⑮ 12 V DC −⑯    +⑮ 12/0 V DC −⑯    +⑮ 0 V DC −⑯<br>Cycle action is performed according to deviation. | +⑮ 0 V DC −⑯    +⑮ 0/12 V DC −⑯    +⑮ 12 V DC −⑯<br>Cycle action is performed according to deviation. |
| Direct current output | +⑮ 20 mA DC −⑯    +⑮ 20 to 4 mA DC −⑯    +⑮ 4 mA DC −⑯<br>Changes continuously according to deviation. | +⑮ 4 mA DC −⑯    +⑮ 4 to 20 mA DC −⑯    +⑮ 20 mA DC −⑯<br>Changes continuously according to deviation. |

Event output EV2 terminal numbers: 19, 20

Event output EV3 terminal numbers: 6, 7

## 10.4 Alarm Action

| | High limit alarm | Low limit alarm |
|---|---|---|
| Alarm action | EV1 hysteresis<br>ON / OFF<br>-EV1 value  SV  +EV1 value | EV1 hysteresis<br>ON / OFF<br>-EV1 value  SV  +EV1 value |
| Alarm output | + side<br>- side | + side<br>- side |
| | High/Low limits alarm | High/Low limits independent alarm |
| Alarm action | EV1 hysteresis<br>ON / OFF<br>EV1 value  SV  EV1 value | EV1 hysteresis<br>ON / OFF<br>EV1 low limit value  SV  EV1 high limit value |
| Alarm output | | |
| | High/Low limit range alarm | High/Low limit range independent |
| Alarm action | EV1 hysteresis<br>ON / OFF<br>EV1 value  SV  EV1 value | EV1 hysteresis<br>ON / OFF<br>EV1 low limit value  SV  EV1 high limit value |
| Alarm output | | |
| | Process high alarm | Process low alarm |
| Alarm action | EV1 hysteresis<br>ON / OFF<br>EV1 value | EV1 hysteresis<br>ON / OFF<br>EV1 value |
| Alarm output | | |

| High limit with standby | Low limit with standby alarm |
|---|---|
| **Alarm action** | |

Alarm action (High limit with standby): ON / OFF, EV1 hysteresis, -EV1 value, SV, +EV1 value

Alarm action (Low limit with standby alarm): ON / OFF, EV1 hysteresis, -EV1 value, SV, +EV1 value

**Alarm output**

High limit with standby:
- + side
- - side

Low limit with standby alarm:
- + side
- - side

| High/Low limits with standby alarm | High/Low limits with standby independent |
|---|---|

Alarm action (High/Low limits with standby alarm): ON / OFF, EV1 hysteresis, EV1 value, SV, EV1 value

Alarm action (High/Low limits with standby independent): ON / OFF, EV1 hysteresis, EV1 low limit value, SV, EV1 high limit value

**Alarm output**

■ : Event output EV1 terminals 17, 18: ON

▧ : Event output EV1 terminals 17, 18: ON or OFF

☐ : Event output EV1 terminals 17, 18: OFF

▨ : Alarm output is in standby.
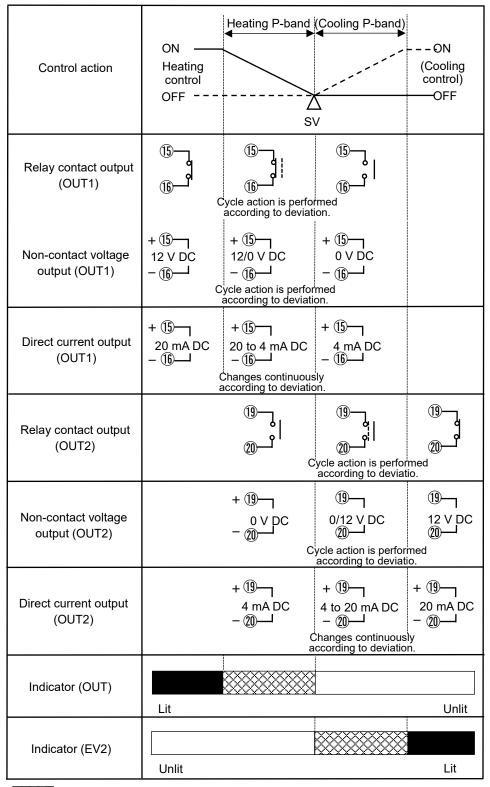

- EV1 value, EV1 high limit value, and EV1 hysteresis represent EV1 alarm value, EV1 high limit alarm value and EV1 alarm hysteresis respectively.
  EV1 will be substituted by EV2 or EV3.

- EV1 indicator lights up when Event output EV1 terminals 17 and 18 are ON, and turns off when their output terminals 17 and 18 are OFF.

  EV2 indicator lights up when Event output EV2 terminals 19 and 20 are ON, and turns off when their output terminals 19 and 20 are OFF.

  EV3 indicator lights up when Event output EV3 terminals 6 and 7 are ON, and turns off when their output terminals 6 and 7 are OFF.

## 10.5 OUT2 (Heating/Cooling Control) Action

| | Heating P-band (Cooling P-band) | | |
|---|---|---|---|
| Control action | ON / Heating control — OFF ---- △ SV ---- ON (Cooling control) / OFF | | |
| Relay contact output (OUT1) | ⑮ ⑯ | ⑮ ⑯ — Cycle action is performed according to deviation. | ⑮ ⑯ |
| Non-contact voltage output (OUT1) | + ⑮ 12 V DC − ⑯ | + ⑮ 12/0 V DC − ⑯ — Cycle action is performed according to deviation. | + ⑮ 0 V DC − ⑯ |
| Direct current output (OUT1) | + ⑮ 20 mA DC − ⑯ | + ⑮ 20 to 4 mA DC − ⑯ — Changes continuously according to deviation. | + ⑮ 4 mA DC − ⑯ |
| Relay contact output (OUT2) | | ⑲ ⑳ | ⑲ ⑳ — Cycle action is performed according to deviatio. | ⑲ ⑳ |
| Non-contact voltage output (OUT2) | | + ⑲ 0 V DC − ⑳ | ⑲ 0/12 V DC ⑳ — Cycle action is performed according to deviatio. | ⑲ 12 V DC ⑳ |
| Direct current output (OUT2) | | + ⑲ 4 mA DC − ⑳ | + ⑲ 4 to 20 mA DC − ⑳ — Changes continuously according to deviation. | + ⑲ 20 mA DC − ⑳ |
| Indicator (OUT) | ██████ ▨▨▨▨▨ ☐☐☐☐☐ Lit                                          Unlit | | |
| Indicator (EV2) | ☐☐☐☐☐ ▨▨▨▨▨ ██████ Unlit                                         Lit | | |

▨ : Turns ON (lit) or OFF (unlit).

| | Relay contact 1a | Control capacity: 3 A 250 V AC (resistive load) $\qquad$ 1 A 250 V AC (inductive load cos$\phi$=0.4)<br>Electrical life: 100,000 cycles<br>Minimum applicable load: 10 mA 5 V DC |
| **Control output OUT2**<br>(EV2, EV3D□ options) | | |
| | Relay contact 1a<br>[EV2, EV3(DR) options] | Control capacity: 3 A 250 V AC (resistive load) $\qquad$ 1 A 250 V AC (inductive load cos$\phi$=0.4)<br>Electrical life: 100,000 cycles<br>Minimum applicable load: 10 mA 5 V DC |
| | Non-contact voltage (for SSR drive)<br>(DS, EV3DS options) | 12 V DC±15 %<br>Max. 40 mA (short circuit protected) |
| | Direct current<br>(DA, EV3DA options) | 4 – 20 mA DC (Resolution: 12000)<br>Load resistance: Max. 550 Ω |
| **Transmission output**<br>(EIT option) | | |
| | Resolution | 12000 |
| | Output | 4 – 20 mA DC (Load resistance: Max. 550 Ω) |
| | Output accuracy | Within ±0.3% of Transmission output span |
| | Response time | 400 ms + Input sampling period (0%→90%) |
| **Insulated power output**<br>(P24 option) | | |
| | Output voltage | 24±3 V DC (when load current is 30 mA DC) |
| | Ripple voltage | Within 200 mV DC (when load current is 30 mA DC) |
| | Max. load current | 30 mA DC |

**Power**

| Power supply | Model | PCB1□00-□□ | PCB1□10-□□ |
|---|---|---|---|
| | Power supply | 100 – 240 V AC, 50/60 Hz | 24 V AC/DC, 50/60 Hz |
| | Allowable fluctuation range | 85 – 264 V AC | 20 – 28 V AC/DC |

| Power consumption | Power supply | Power consumption | |
|---|---|---|---|
| | 100 – 240 V AC | Approx. 8 VA max. (When the maximum number of options are ordered: Approx. 11 VA max.) | |
| | 24 V AC | Approx. 5 VA max. (When the maximum number of options are ordered: Approx. 8 VA max.) | |
| | 24 V DC | Approx. 5 W max. (When the maximum number of options are ordered: Approx. 8 W max.) | |

| Inrush current | Power supply | Inrush current | |
|---|---|---|---|
| | 100 – 240 V AC | Max. 14 to 34 A | |
| | 24 V AC | Max. 34 A | |
| | 24 V DC | Max. 34 A | |

| Circuit insulation configuration | When C5W or C5 option is ordered: |
|---|---|
| |  |

(Fig. 11.1-1)

When OUT1 and OUT2 are a non-contact voltage output or direct current output, OUT1 is not electrically insulated from OUT2.

Insulation resistance: 10 MΩ minimum, at 500 V DC

**When EIW or W option is ordered:**

(Fig. 11.1-2)

When OUT1 and OUT2 are a non-contact voltage output or direct current output, OUT1 is not electrically insulated from OUT2.

Insulation resistance: 10 M$\Omega$ minimum, at 500 V DC

**When EIT or EI option is ordered:**

(Fig. 11.1-3)

TA: When EIT option is ordered.
EV3: When EI option is ordered.

When OUT1 and OUT2 are a non-contact voltage output or direct current output, OUT1 is not electrically insulated from OUT2.

Insulation resistance: 10 MΩ minimum, at 500 V DC

| Dielectric strength | Between input terminal and power terminal: 1.5 kV AC for 1 minute |
|---|---|
| | Between output terminal and power terminal: 1.5 kV AC for 1 minute |
| | Between output terminal (P24) and power terminal: 500 V AC for 1 minute |

**Recommended Environment**

| Ambient temperature | -10 to 55℃ (However, non-condensing or no icing) |
|---|---|
| Ambient humidity | 35 to 85 %RH (However, non-condensing) |
| Environmental specification | RoHS directive compliant |

**Performance**

| Base accuracy | | At ambient temperature 23℃ (for a single unit mounting) |
|---|---|---|
| | Thermocouple | Within ±0.2% of each input span±1 digit<br>However, R, S inputs, 0 to 200℃ (32 to 392℉): Within ±6℃ (12℉)<br>B input, 0 to 300℃ (32 to 572℉): Accuracy is not guaranteed.<br>K, J, E, T, N inputs, Less than 0℃ (32℉): Within±0.4% of input span ±1 digit |
| | RTD | Within ±0.1% of each input span±1 digit |
| | Direct current DC voltage | Within ±0.2% of each input span±1 digit |
| Effect of ambient temperature | | Within 50 ppm/℃ of each input span |
| Input sampling period | | 125 ms |
| Time indication accuracy | | Within ±0.5% of setting time |
| Setting resolution | Temperature | Thermocouple, RTD input without decimal point: 1℃ (℉)<br>Thermocouple, RTD input with decimal point: 0.1℃ (℉)<br>DC voltage, current input: 1 |
| | Time | 1 minute or 1 second |

**General Structure**

| Weight | | Approx. 220 g |
|---|---|---|
| External dimensions | | 96 x 96 x 68 (W x H x D) (Depth of control panel interior: 60 mm) |
| Mounting | | Flush (Applicable panel thickness: 1 to 7 mm) |
| Case | | Flame-resistant resin, Color: Black |
| Front panel | | Membrane sheet |
| Drip-proof/Dust-proof | | IP66 for front panel only |
| Display | PV Display | In RUN mode, indicates process variable (PV).<br>In setting mode, indicates setting characters.<br>Flashes during Wait action or program control HOLD in program control.<br>7-segments Red LED display 4.5 digits<br>Character size: 24.0 x 11.0 mm (H x W) |
| | SV Display | In RUN mode, indicates desired value (SV), Output manipulated variable (MV), or Remaining time (TIME).<br>Retains display indication at power OFF.<br>In setting mode, indicates the set values.<br>7-segments Green LED display 4.5 digits<br>Character size:14.0 x 7.0 mm (H x W) |

| | | |
|---|---|---|
| | **PTN/STEP Display** | Indicates the pattern number or step number.<br>Each time the DISP key is pressed, the PTN/STEP Display and the PTN/STEP indicator alternately indicate the pattern number and step number.<br>Flashes during Wait action, or when the step number is indicated.<br>If 'SV digital reception' is selected in [Communication protocol], ⌐ is indicated.<br>7-segments Orange LED display 1.5-digits<br>Character size:14.0 x 7.0 mm (H x W) |
| **Indicator** | **PTN indicator** | Lights up when the pattern number is indicated on the PTN/STEP Display.<br>Orange LED |
| | **STEP indicator** | Lights up when the step number is indicated on the PTN/STEP Display.<br>Orange LED |
| | **PTN/STEP indicator** | LED for the pattern number or step number lights up.<br>Each time the DISP key is pressed, the PTN/STEP indicator and the PTN/STEP Display alternately indicate the pattern number and step number.<br>Green LED 12 pieces (PTN, STEP, 1 to 10) |

| | **RUN (Orange)** | Lights up during program control RUN.<br>Flashes during program control HOLD or Fixed value control. |
| | **EV1 (Red)** | Lights up when Event output EV1 is ON. |
| | **EV2 (Red)** | Lights up when Event output EV2 [(EV2, EV3(DR) options] is ON.<br>Lights up when control output OUT2 [Cooling output: DS, DA, EV2 (if ⌷020 is selected in Event output EV2 allocation), EV3D☐ options] is ON.<br>For direct current output type (DA, EV3DA options), flashes corresponding to the MV in 125 ms cycles. |
| | **EV3 (Red)** | Lights up when Event output EV3 (EV3D☐, EI options) is ON. |
| | **AT (Orange)** | Flashes while AT is performing. |
| | **T/R (Orange)** | Lights up during Serial communication (C5W, C5 options)<br>TX (transmitting) output. |

**Setting Structure**

| Function key | ⌃ | UP key | In setting mode, increases the numerical value. By pressing for approx. 1 second during program control RUN, time progress pauses, and program control HOLD function initiates. |
|---|---|---|---|
| | ⌄ | DOWN key | In setting mode, decreases the numerical value. |
| | FAST | FAST key | In setting mode, makes the numeric value change faster. During program control RUN, makes step time progress 60 times faster. |
| | RST | RESET key | In setting mode, registers the setting data, and moves to RUN mode. |
| | MODE | MODE key | In setting mode, registers the setting data, and moves to the next setting item. |
| | PTN | PATTERN key | During program control STOP (in Standby), selects a program pattern number to perform or to set. By pressing this key during program control RUN, the unit moves to Monitor mode. In Monitor mode, switches the indication item. |
| | DISP | Display key | During RUN mode, the PTN/STEP Display and PTN/STEP indicator alternately indicates the pattern number and step number. In setting mode, registers the setting data, and moves back to the previous mode. |
| | RUN | RUN key | Performs program control, or cancels program control HOLD function while program control is held. By pressing for approx. 1 second during program control RUN, stops performing step, and proceeds to the next step (Advance function initiates.). |
| | STOP | STOP key | Stops program control by pressing for approx. 1 second during program control RUN, or cancels pattern end output. |

**Program Performance**

| Number of patterns | 10 patterns (Linkable) |
|---|---|
| Number of steps | 100 (10 steps/pattern) |
| Number of repetitions | 0 to 10000 times (Repetitions disabled when set to 0) |
| Program time range | 0 to 99 hours 59 minutes/step, or 0 to 99 minutes 59 seconds/step (When – – – – is set: Fixed value control is performed using step SV.) |
| Wait value | Thermocouple, RTD inputs: 0 to 20% of input span<br>DC voltage, current input: 0 to 20% of scaling span (The placement of the decimal point follows the selection.)<br>(The Wait function is disabled when set to 0 or 0.0.) |

**Control Performance**

| Control action | • PID control action (with AT function) |
|---|---|
| | • PI control action (When derivative time is set to 0.) |
| | • PD control action (When integral time is set to 0.) |
| | • P control action (When integral and derivative time are set to 0.) |
| | • ON/OFF control action (When proportional band is set to 0 or 0.0.) |
| OUT1 proportional band (P) | Thermocouple, RTD inputs without decimal point: |
| |   0 to Input span℃（℉） |
| | Thermocouple, RTD inputs with decimal point: |
| |   0.0 to Input span℃（℉） |
| | DC voltage, current inputs: |
| |   0.0 to 1000.0% |
| | (ON/OFF control action when set to 0 or 0.0.) |
| Integral time (I) | 0 to 3600 seconds (Setting the value to 0 disables the function.) |
| Derivative time (D) | 0 to 1800 seconds (Setting the value to 0 disables the function.) |
| OUT1 proportional cycle | 0.5, 1 to 120 seconds |
| ARW | 0 to 100% |
| OUT1 ON/OFF hysteresis | 0.1 to 1000.0℃（℉） |
| | DC voltage, current inputs: |
| |   1 to 10000 (The placement of the decimal point follows the selection.) |
| OUT1 high limit, OUT1 low limit | 0 to 100% (Direct current output: -5 to 105%) |

**Standard Function**

| Wait function | During program control, the program does not proceed to the next step until the deviation between PV and SV enters SV±Wait value at the end of step. The PV Display and PTN/STEP Display flash while the Wait function is working. |
|---|---|
| Program control HOLD function | During program control RUN, progress of current step can be suspended. During program control RUN, if the ⌃ key is pressed for approx. 1 second, the program control HOLD function is enabled. While the program control HOLD function is working, the PV Display and RUN indicator flash. Pressing the RUN key cancels suspension, and program control resumes. |
| Advance function | Interrupts current step during program control RUN, and proceeds to the beginning of the next step. During program control RUN, if the RUN key is pressed for approx. 1 second, the Advance function is enabled. |
| Pattern link and repetitions function | Patterns 1 to 10 can be linked to the next pattern (of each pattern). For Pattern 10, Pattern 1 can be linked. Number of repetitions for Patterns 1 to 10: 0 to 10000 times. For repetitions of linked patterns, the whole linked pattern will be repeated as many times as set for the former pattern. |
| Step SV when program control starts | Program control starts from the step SV set in [Step SV when program control starts]. |

| Program control start type | Selects program control start type.<br>**PV start:**<br>　Only when program control starts, the step SV is advanced to the PV, then program control starts.<br>**PVR start:**<br>　When program control starts and in pattern repeating, the step SV is advanced to the PV, then program control starts.<br>**SV start:**<br>　Program control starts from the step SV which has been set in [Step SV when program control starts]. |
|---|---|
| Power restore action | If power fails during program control RUN, the controller can be operated depending on the selection in [Power restore action].<br><br>**Stops after power is restored:**<br>　Stops current program control, and returns to program control STOP (in Standby).<br>**Continues after power is restored:**<br>　Continues (Resumes) previous program control after power is restored.<br>**Suspends after power is restored:**<br>　Suspends (on hold) current program control, and performs Fixed value control using the step SV at the time of suspension.<br>　Pressing the RUN key cancels suspension, and program control resumes.<br>Progressing time error when power is restored: 1 minute or 1 second |
| Step time speed-up function | During program control RUN, makes step time progress 60 times faster while the FAST key is pressed.<br>If the Wait function is set, the Wait function has priority. |
| Event output EV1 | Output turns ON or OFF, depending on Event conditions selected in [Event output EV1 allocation]:<br>　Alarm output, Heater burnout alarm output, Loop break alarm output, Time signal output, Output during AT, Pattern end output, Output by communication command, RUN output |
| Alarm action | Selects any alarm action in [Event output EV☐ allocation] from the following:<br>　High limit alarm, Low limit alarm, High/Low limits alarm, High/Low limits independent alarm, High/Low limit range alarm,<br>　High/Low limit range independent alarm, Process high alarm, Process low alarm, High limit with standby alarm, Low limit with standby alarm, High/Low limits with standby alarm, High/Low limits with standby independent alarm<br>Alarm Energized/De-energized action are applied to the above alarms, totaling 24 alarm types. No alarm action can also be selected. |
|  Set value | Factory default value: 0 |
|  Action | ON/OFF action |
|  Alarm hysteresis | 0.1 to 1000.0℃（℉）<br>DC voltage, current inputs: 1 to 10000 (The placement of the decimal point follows the selection.) |
|  Output | EV☐ output for which Alarm output (001 to 012) is selected in [Event output EV☐ allocation]. |

| | | |
|---|---|---|
| **Loop break alarm** | | When Loop break alarm is selected in [Event output EV☐ allocation], detects actuator trouble (heater burnout, heater adhesion) or sensor burnout. |
| | **Loop break alarm time** | 0 to 200 minutes |
| | **Loop break alarm band** | Thermocouple, RTD inputs without decimal point: 0 to 150℃ (℉)<br>Thermocouple, RTD inputs with decimal point: 0.0 to 150.0℃ (℉)<br>DC voltage, current inputs: 0 to 1500 (The placement of the decimal point follows the selection.) |
| | **Output** | EV☐ output for which Loop break alarm output is selected in [Event output EV☐ allocation]. |
| **Time signal output** | | When Time signal output is selected in [Event output EV☐ allocation], Time signal output activates during Time signal output ON time within one pattern total time.<br>Time signal output ON time follows Time signal output OFF time after the program control starts.<br>During Wait action or program control HOLD, progress time of Time signal output stops.<br>When step time is changed during program control RUN, Time signal output timing is re-calculated using the pattern time after change. |
| **Output during AT** | | When 'Output during AT' is selected in [Event output EV☐ allocation], turns ON during AT. |
| **Pattern end output** | | When Pattern end output is selected in [Event output EV☐ allocation], Pattern end output is turned ON during Pattern end output time after program control is finished, and the SV Display flashes 𝘗𝘌𝘯𝘥.<br>By pressing the STOP key for approximately 1 second, Pattern end output is turned OFF, and the unit returns to program control STOP (in Standby). If Pattern end output time is set, Pattern end output is automatically turned OFF after Pattern end output time has expired. The unit returns to program control STOP (in Standby). |
| **RUN output** | | When 'RUN output' is selected in [Event output EV☐ allocation], turns ON during program control RUN. |
| **Data clear function** | | During program control STOP (in Standby), if the ⌃, ⌄ and STOP keys (in that order) are pressed together for approx. 3 seconds, the PV Display indicates 𝘤𝘓𝘳𝘰, and the unit enters [Data clear Yes/No]. Select 𝘠𝘌𝘚𝘰 (Data clear Yes), and press the MODE key. The PV Display indicates 𝘪𝘯𝘪𝘵 for approx. 3 seconds, and all data will return to factory default values. |

**Attached Functions**

| | |
|---|---|
| **Sensor correction coefficient** | Sets slope of input value from a sensor. |
| **Sensor correction** | Corrects the input value from a sensor. |
| **Set value lock** | Locks the set values to prevent setting errors. |
| **Power failure countermeasure** | The setting data is backed up in the non-volatile IC memory. |
| **Self-diagnosis** | The CPU is monitored by a watchdog timer, and if an abnormal status occurs, the controller is switched to warm-up status, turning all outputs OFF. |
| **Automatic cold junction temperature compensation** | Detects the temperature at the connection terminal between the thermocouple and the instrument, and maintains it at the same status as if the reference junction location temperature were at $0℃$ $(32℉)$. |
| **Indication range, Control range** | Thermocouple input: [Input range low limit value – $50℃$ $(100℉)$] to [Input range high limit value + $50℃$ $(100℉)$] RTD input: [Input range low limit value – (Input span x 1%)] to [Input range high limit value + $50℃$ $(100℉)$] DC voltage, current inputs: [Scaling low limit value – (Scaling span x 1%)] to [Scaling high limit value + (Scaling span x 10%)] |
| Input error (Overscale, Underscale) | If input errors (overscale, underscale) occur, the following will be performed depending on the selection in [Error indication]. **If 'Disabled' is selected in [Error indication]:** Overscale occurs if PV has exceeded Input range high limit value (Scaling high limit value for DC voltage, current inputs). The PV Display indicates PV. Underscale occurs if PV has dropped below Input range low limit value (Scaling low limit value for DC voltage, current inputs). The PV Display indicates PV. **If 'Enabled' is selected in [Error indication]:** Overscale occurs if PV has exceeded Input range high limit value (Scaling high limit value for DC voltage, current inputs). The PV Display indicates the PV and error code $Er05$ alternately. Underscale occurs if PV has dropped below Input range low limit value (Scaling low limit value for DC voltage, current inputs). The PV Display indicates the PV and error code $Er06$ alternately. |

| Burnout |
| --- |

If burnout occurs, the following will be performed depending on the selection in [Error indication].

**If 'Disabled' is selected in [Error indication]:**

If PV has exceeded Indication range and Control range, the PV Display flashes ‾ ‾ ‾ ‾. OUT1 and OUT2 are turned OFF (OUT1 low limit value for direct current output, OUT2 low limit value for DA, EV3DA).

If PV has dropped below Indication range and Control range, the PV Display flashes _ _ _ _. OUT1 and OUT2 are turned OFF (OUT1 low limit value for direct current output, OUT2 low limit value for DA, EV3DA).

If thermocouple or RTD input is burnt out, or if DC voltage (0 – 1 V DC) input is disconnected, the PV Display flashes ‾ ‾ ‾ ‾.

If the following DC voltage or current input is disconnected:

    4 – 20 mA DC, 1 – 5 V DC inputs: The PV Display flashes _ _ _ _.

    0 – 20 mA DC, 0 – 5 V DC, 0 – 10 V DC inputs: The PV Display indicates the value corresponding
                    with 0 mA DC or 0 V DC input.

If Alarm output, Heater burnout alarm output or Loop break alarm output is selected in [Event output EV☐ allocation], Event output will be turned ON under the alarm active conditions.
Burnout is enabled even in program control STOP (in Standby) status. However, Event output is not turned ON.

[Output status when input errors occur] can be used only for controllers using direct current and voltage inputs, and direct current output.
Output status differs depending on selection in [Output status when input errors occur].

| Output status when input errors occur | Contents, Indication | Output Status | | | |
| --- | --- | --- | --- | --- | --- |
| | | OUT1 | | OUT2 | |
| | | Direct (Cooling) action | Reverse (Heating) action | Direct (Cooling) action | Reverse (Heating) action |
| on☐ | [ ‾ ‾ ‾ ‾ ] flashes. | ON (20 mA) or OUT1 high limit value (*) | OFF (4 mA) or OUT1 low limit value | OFF or OUT2 low limit value | ON or OUT2 high limit value (*) |
| oFF☐ | | OFF (4 mA) or OUT1 low limit value | | | OFF or OUT2 low limit value |
| on☐ | [_ _ _ _] flashes. | OFF (4 mA) or OUT1 low limit value | ON (20 mA) or OUT1 high limit value (*) | ON or OUT2 high limit value (*) | OFF or OUT2 low limit value |
| oFF☐ | | | OFF (4 mA) or OUT1 low limit value | OFF or OUT2 low limit value | |

   (*) Outputs a value between OFF (4 mA) and ON (20 mA) or between OUT1 (or OUT2) low limit value
       and OUT1 (or OUT2) high limit value, depending on deviation.

**If 'Enabled' is selected in [Error indication]:**

If PV has exceeded Indication range and Control range, the PV Display indicates ‾ ‾ ‾ ‾ and Er07 alternately. OUT1 and OUT2 are turned OFF (OUT1 low limit value for direct current output, OUT2 low limit value for DA, EV3DA).

If PV has dropped below Indication range and Control range, the PV Display indicates _ _ _ _ and Er07 alternately. OUT1 and OUT2 are turned OFF (OUT1 low limit value for direct current output, OUT2 low limit value for DA, EV3DA).

If thermocouple, RTD or DC voltage (0 to 1 V DC) input is burnt out or disconnected, the PV Display indicates ‾ ‾ ‾ ‾ and Er07 alternately.

If the following DC voltage or current input is disconnected:

    4 – 20 mA DC, 1 – 5 V DC inputs: The PV Display indicates _ _ _ _ and Er07 alternately.

    0 – 20 mA DC, 0 – 5 V DC, 0 – 10 V DC inputs: The PV Display indicates the value corresponding
                  with 0 mA DC or 0 V DC input.

If Alarm output, Heater burnout alarm output or Loop break alarm output is selected in [Event output EV☐ allocation], Event output will be turned ON under the alarm active conditions.
Burnout is enabled even in program control STOP (in Standby) status. However, Event output is not turned ON.

[Output status when input errors occur] can be used only for controllers using direct current and voltage inputs, and direct current output.
Output status differs depending on selection in [Output status when input errors occur].

| Output status when input errors occur | Contents, Indication | Output Status | | | |
| --- | --- | --- | --- | --- | --- |
| | | OUT1 | | OUT2 | |
| | | Direct (Cooling) action | Reverse (Heating) action | Direct (Cooling) action | Reverse (Heating) action |
| on☐ | Indicates [ ---- ] and [Er-07] alternately. | ON (20 mA) or OUT1 high limit value (*) | OFF (4 mA) or OUT1 low limit value | OFF or OUT2 low limit value | ON or OUT2 high limit value (*) |
| oFF☐ | | OFF (4 mA) or OUT1 low limit value | | | OFF or OUT2 low limit value |
| on☐ | Indicates [ ---- ] and [Er-07] alternately. | OFF (4 mA) or OUT1 low limit value | ON (20 mA) or OUT1 high limit value (*) | ON or OUT2 high limit value (*) | OFF or OUT2 low limit value |
| oFF☐ | | | OFF (4 mA) or OUT1 low limit value | OFF or OUT2 low limit value | |

(*) Outputs a value between OFF (4 mA) and ON (20 mA) or between OUT1 (or OUT2) low limit value and OUT1 (or OUT2) high limit value, depending on deviation.

| Warm-up indication | After the power supply to the instrument is turned on, the PV Display indicates the input type, and SV Display indicates input range high limit value (for thermocouple, RTD inputs) or scaling high limit value (for direct current and voltage inputs) for approximately 3 seconds. Control output is OFF (0 mA for direct current output), and Transmission output is 0 mA. |
| --- | --- |
| **Console communication** | By connecting to the tool cable (CMD-001, sold separately) to the tool cable connector, the following operations can be conducted from an external computer, using the Console software SWC-PCB101M. Console communication and Serial communication (C5W, C5 options) cannot be used together.<br>(1) Reading and writing of step SV, step time, PID and various set values<br>(2) Reading of PV and action status<br>(3) Function change<br>Communication line: TTL level |

**Other**

| **Accessories included** | Mounting brackets: 1 set<br>Instruction manual (excerpt): 1 copy |
| --- | --- |
| **Accessories sold separately** | Terminal cover<br>CT (Current transformer):<br>   CTL-6-S-H (For Heater burnout alarm output 20 A)<br>   CTL-12-S36-10L1U (For Heater burnout alarm output 100 A)<br>Tool cable CMD-001 |

## 11.2　Optional Specifications

| | |
|---|---|
| **Event output EV2**<br>[EV2, EV3(DR) options] | Output will be turned ON or OFF depending on the Event conditions selected in [Event output EV2 allocation].<br>One output can be selected from the following:<br>　Alarm output, Heater burnout alarm output, Loop break alarm output, Time signal output, Output during AT, Pattern end output, Output by communication command, RUN output, Heating/Cooling control<br>Relay contact output |
| **Heating/Cooling control output** [EV2(DR), DS, DA, EV3D☐ options] | Performs Heating/Cooling control. |
| **OUT2 proportional band** | Thermocouple, RTD inputs without decimal point: 0 to Input span℃（℉）<br>Thermocouple, RTD inputs with decimal point: 0.0 to Input span℃（℉）<br>DC voltage, current inputs: 0.0 to 1000.0%<br>(ON/OFF control when set to 0.0) |
| **Integral time (I)** | 0 to 3600 seconds (Setting to 0 disables the function.)<br>(Same as OUT1 integral time) |
| **Derivative time (D)** | 0 to 1800 seconds (Setting to 0 disables the function.)<br>(Same as OUT1 derivative time) |
| **OUT2 proportional cycle** | 0.5,　1 to 120 seconds |
| **Overlap/Dead band** | Thermocouple, RTD inputs:<br>　-200.0 to 200.0℃（℉）<br>DC voltage, current inputs:<br>　-2000 to 2000 (The placement of the decimal point follows the selection.) |
| **OUT2 ON/OFF hysteresis** | Thermocouple, RTD inputs:<br>　0.1 to 1000.0℃（℉）<br>DC voltage, current inputs:<br>　1 to 10000 (The placement of the decimal point follows the selection.) |
| **OUT2 high limit, OUT2 low limit** | 0 to 100% (DA, EV3DA: –5 to 105%) |
| **OUT2 cooling method** | (1) Air cooling (Linear characteristics)<br>(2) Oil cooling (1.5th power of the linear characteristics)<br>(3) Water cooling (2nd power of the linear characteristics) |
| **Insulated power output**<br>(P24 option) | |
| **Output voltage** | 24±3 V DC (when load current is 30 mA DC) |
| **Ripple voltage** | Within 200 mV DC (when load current is 30 mA DC) |
| **Max. load current** | 30 mA DC |
| **Event output EV3**<br>( EV3D☐, EI options) | Output will be turned ON or OFF depending on the Event conditions selected in [Event output EV3 allocation].<br>One output can be selected from the following:<br>　Alarm output, Heater burnout alarm output, Loop break alarm output, Time signal output, Output during AT, Pattern end output, Output by communication command, RUN output |
| **Serial communication**<br>(C5W, C5 options) | The following operations can be carried out from an external computer.<br>(1) Reading and writing of the step SV, step time, PID values and various set values<br>(2) Reading of the PV and action status　(3) Function change |
| **Communication line** | EIA RS-485 |
| **Communication method** | Half-duplex communication |
| **Communication speed** | 9600, 19200, 38400 bps (Selectable by keypad) |
| **Synchronization method** | Start-stop synchronization |

| Communication protocol | Shinko protocol, SV digital transmission, SV digital reception, Modbus ASCII mode, Modbus RTU mode (Selectable by keypad) Communication converter IF-400 is available for Shinko protocol and Modbus protocol. | | |
|---|---|---|---|
| Data bit/Parity | Data bit: 7, 8 (Selectable by keypad) Parity: Even, Odd, No parity (Selectable by keypad) | | |
| Stop bit: | 1, 2 (Selectable by keypad) | | |

| Data format | Communication Protocol | Shinko Protocol | Modbus ASCII | Modbus RTU |
|---|---|---|---|---|
| | Start bit | 1 | 1 | 1 |
| | Data bit | 7 (8) Selectable | 7 (8) Selectable | 8 |
| | Parity | Even (No parity, Odd) Selectable | Even (No parity, Odd) Selectable | No parity (Even, Odd) Selectable |
| | Stop bit | 1 (2) Selectable | 1 (2) Selectable | 1 (2) Selectable |

| Response delay time | Response from the controller can be delayed after receiving command from the host computer. If Response delay time is changed via software communication, the changed delay time will be reflected from that response data. • Setting range: 0 to 1000 ms |
|---|---|
| SV digital transmission | When 'SV digital transmission (Shinko protocol)' is selected in [Communication protocol], step SV can be digitally transmitted to the connected Shinko digital indicating controllers with the communication function (C5 option). When 'SV digital reception (Shinko protocol)' is selected in [Communication protocol], step SV can be received via SVTC command from the connected Shinko programmable controllers PCA1 or PCB1 (on which 'SV digital transmission' should be selected in [Communication protocol]). |

(Fig. 11.2-1)

| | | |
|---|---|---|
| **Heater burnout alarm**<br>(C5W, EIW, W options) | | Monitors heater current with CT (current transformer), and detects heater burnout.<br>EV☐ output, for which Heater burnout alarm is selected in [Event output EV☐ allocation], will be turned ON or OFF.<br>This alarm is also activated when the input is burnt out. |
| | **Rated current:** | 20 A, 100 A (Must be specified when ordering.)<br>Single-phase: Detects burnout with CT1 input.<br>3-phase: Detects burnout with CT1 and CT2 inputs. |
| | **Setting accuracy** | ±5% of the rated current |
| **Transmission output**<br>(EIT option) | | Converting the value (PV, SV or MV transmission) to analog signal every 125 ms, outputs the value in current.<br>Outputs Transmission output low limit value if Transmission output high limit and low limit value are the same.<br>If SV or MV transmission is selected, 4 mA is output during program control STOP (in Standby). |
| **Event input**<br>(C5W, EIW, EIT, C5, EI options) | | Action can be switched by event conditions selected in [Event input DI☐ allocation].<br>One function can be selected from the following:<br>    Pattern number selection, Direct/Reverse action, Program control RUN/STOP, Program control Holding/Not holding, Program control Advance function<br>Signal edge action from OFF to ON / ON to OFF is engaged.<br>However, when power is turned ON, level action is engaged except Program control Advance function. |

# 12. Troubleshooting

⚠ **Warning**

**Turn the power supply to the instrument off before wiring or checking. Working on or touching the terminal with the power switched on may result in severe injury or death due to electrical shock.**
**Moreover, the instrument must be grounded before the power supply to the instrument is turned on.**

If any malfunctions occur, refer to the following items after checking that power is being supplied to the controller.

## 12.1 Indication

| Problem | Possible Cause | Solution |
|---|---|---|
| The PV Display indicates $E\text{-}01$. | Internal non-volatile IC memory is defective. | Cancel the error code by pressing the MODE key, and perform data clearing.(p.90) If the problem is not still solved after power is turned ON again, contact our agency or us. |
| The PV Display indicates $E\text{-}02$. | Data writing (in non-volatile IC memory) error when power failure occurs. | Cancel the error code by pressing the MODE key, and execute data clearing. (P.90) |
| The PV Display indicates PV and $E\text{-}05$ (*) alternately. | Overscale. PV has exceeded Input range high limit value (scaling high limit value for DC voltage, current inputs). | Check the input signal source. |
| The PV Display indicates PV and $E\text{-}06$ (*) alternately. | Underscale. PV has dropped below Input range low limit value (scaling low limit value for DC voltage, current inputs). | Check the input signal source and wiring of input terminals. |
| The PV Display flashes ‾ ‾ ‾ ‾. | PV has exceeded the Indication range and Control range. | Check the input signal source. |
| The PV Display indicates ‾ ‾ ‾ ‾ and $E\text{-}07$(*) alternately. | Burnout of thermocouple, RTD or disconnection of DC voltage (0 to 1 V DC) | Replace each sensor. **How to check whether the sensor is burnt out:** **[Thermocouple]** If the input terminals of the instrument are shorted, and if a value around room temperature is indicated, the instrument is likely to be operating normally, however, the sensor may be burnt out. **[RTD]** If approx. 100 Ω of resistance is connected to the input terminals between A-B of the instrument and between B-B is shorted, and if a value around 0℃ (32℉) is indicated, the instrument is likely to be operating normally, however, the sensor may be burnt out. **[DC voltage (0 to 1 V DC)]** If the input terminals of the instrument are shorted, and if a scaling low limit value is indicated, the instrument is likely to be operating normally, however, the signal wire may be disconnected. |

(*) Available when 'Enabled' is selected in [Error indication].

| Problem | Possible Cause | Solution |
|---|---|---|
| | Check whether the input terminals of thermocouple, RTD or DC voltage (0 to 1 V DC) are securely mounted to the instrument input terminals. | Connect the sensor terminals to the instrument input terminals securely. |
| The PV Display flashes [_ _ _ _]. | PV has dropped below the Indication range and Control range. | Check the input signal source and wiring of input terminals. |
| The PV Display indicates [_ _ _ _] and [Er07] (*) alternately. | Check whether input signal wire for direct current (4 to 20 mA DC) or DC voltage (1 to 5 V DC) is disconnected. | **How to check whether the input signal wire is disconnected:**<br>**[Direct current (4 to 20 mA DC)]**<br>If the input to the input terminals of the instrument is 4 mA DC and if a scaling low limit value is indicated, the instrument is likely to be operating normally, however, the signal wire may be disconnected.<br>**[DC voltage (1 to 5 V DC)]**<br>If the input to the input terminals of the instrument is 1 V DC and if a scaling low limit value is indicated, the instrument is likely to be operating normally, however, the signal wire may be disconnected. |
| | Check whether input signal wire for direct current (4 to 20 mA DC) or DC voltage (1 to 5 V DC) is securely connected to the instrument input terminals. | Connect the input signal wire to the terminals of this instrument securely. |
| | Check if polarity of thermocouple or compensating lead wire is correct.<br>Check whether codes (A, B, B) of RTD agree with the instrument terminals. | Wire them correctly. |
| The PV Display indicates [Er 10]. | Hardware malfunction | Contact our agency or us. |
| The indication of PV Display is irregular or unstable. | Check whether sensor input or temperature unit (℃ or ℉) is correct. | Select the sensor input and temperature unit (℃ or ℉) correctly. |
| | Sensor correction coefficient or Sensor correction value is unsuitable. | Set them to suitable values. |
| | Check whether the sensor specification is correct. | Use a sensor with appropriate specifications. |
| | AC leaks into the sensor circuit. | Use an ungrounded type sensor. |
| | There may be equipment that interferes with or makes noise near the instrument. | Keep the instrument clear of any potentially disruptive equipment. |

(*) Available when 'Enabled' is selected in [Error indication].

| Problem | Possible Cause | Solution |
|---|---|---|
| The PV Display keeps indicating the value set in [Scaling low limit]. | Check whether the input signal wire for direct current (0 to 20 mA DC) and DC voltage (0 to 5 V DC, 0 to 10 V DC) is disconnected. | Check the input signal wires of direct current (0 to 20 mA DC) and DC voltage (0 to 5 V DC, 0 to 10 V DC).<br>**How to check whether the input signal wire is disconnected:**<br>**[Direct current (0 to 20 mA DC)]**<br>If the input to the input terminal of this controller is 4 mA DC, and if a value (converted value from scaling high, low limit setting) corresponding to 4 mA DC is indicated, the controller is likely to be operating normally, however, the input signal wire may be disconnected.<br>**[DC voltage (0 to 5 V DC, 0 to 10 V DC)]**<br>If the input to the input terminal of this controller is 1 V DC, and if a value (converted value from scaling high, low limit setting) corresponding to 1 V DC is indicated, the controller is likely to be operating normally, however, the input signal wire may be disconnected. |
|  | Check whether the input terminals for direct current (0 to 20 mA DC) or DC voltage (0 to 5 V DC, 0 to 10 V DC) are securely connected to the instrument input terminals. | Connect the input terminals of direct current or DC voltage to the input terminals of this instrument securely. |

## 12.2  Key Operation

| Problem | Possible Cause | Solution |
|---|---|---|
| The following values cannot be set:<br> Step SV, step time, OUT1 proportional band, EV☐ alarm value, etc. | Set value lock (Lock 1 or Lock 4) is selected. | Release the lock in [Set value lock]. |
|  | AT is performing. | Cancel AT. |
| Only step SV, step time and EV☐ alarm value can be set. Other settings are not possible. | Set value lock (Lock 2 or Lock 5) is selected. | Release the lock in [Set value lock]. |
| The setting indication does not change in the input range, and new values are unable to be set. | Scaling high or low limit value may be set at the point where the value does not change. | Set it to a suitable value. |
| A pattern number cannot be selected by the PTN key. | A pattern number might be selected by means of Event input. The pattern number selected via Event input has priority over a pattern number selected by the PTN key. | Open (OFF) the SG terminal and any one terminal of Event input (DI1, DI2). |

## 12.3 Control

| Problem | Possible Cause | Solution |
|---|---|---|
| Even though program control is executed, the control is advanced and the program is finished soon. | The step time of the performing pattern number is set to 00:00. | Set the step time to a suitable value. |
| Step does not progress. | Program control is suspended (program control HOLD function). While program control is suspended, the PV Display and RUN indicator flash. | Press the RUN key. Suspension of control will be cancelled, and program control will resume. |
| | The Wait function is working. If the Wait function works, the PV Display and PTN/STEP Display flash. | Press the RUN key for approx. 1 second to cancel the Wait function. The Wait function will be cancelled, and program control will resume. |
| PV does not rise or fall. | Sensor is out of order. | Replace the sensor. |
| | Check whether the sensor or control output terminals are securely mounted to the instrument input terminals. | Ensure that the sensor or control output terminals are mounted to the instrument input terminals securely. |
| | Check whether the wiring of sensor or control output terminals is correct. | Wire them correctly. |
| Control output OUT1 or OUT2 remains in an ON status. | OUT1 or OUT2 low limit value is set to 100% or higher. | Set it to a suitable value. |
| The control output OUT1 or OUT2 remains in an OFF status. | OUT1 or OUT2 high limit value is set to 0% or less. | Set it to a suitable value. |
| The PV Display indicates $Er20$ | AT has not been completed even if approx. 4 hours have elapsed since AT started. | Manually set P, I, D and ARW values. |

# 13. Character Table

• **Explanation of Setting Item**

(e.g.) Setting Step 1 SV

**Upper left:** PV Display
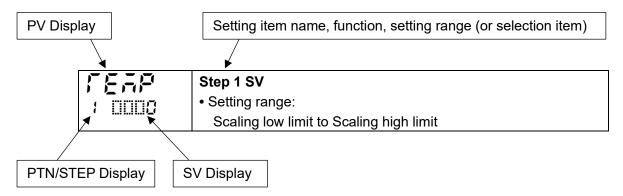

Indicates setting item characters.

**Lower left:** PTN/STEP Display, SV Display

The PTN/STEP Display indicates the selected pattern number, and indication is different depending on the setting item.

The SV Display indicates factory default.

**Right side:** Indicates the setting item, explanation of its function, and setting range.

| PV Display | Setting item name, function, setting range (or selection item) |
|---|---|

| $\Gamma E \bar{\Lambda} P$  1 □□□0 | **Step 1 SV**<br>• Setting range:<br>    Scaling low limit to Scaling high limit |
|---|---|

PTN/STEP Display     SV Display

## 13.1   Error Code

Error codes are indicated on the PV Display.

| Error Code | Error Contents | Occurrence |
|---|---|---|
| Er01<br>1 □500 (*1) | Internal non-volatile IC memory (EEPROM) is defective. | When power is turned ON |
| Er02<br>1 □500 (*1) | Data writing error when power failure occurs. | When power is turned ON |
| Er05<br>1 □500 (*2) | PV has exceeded Input range high limit value (Scaling high limit value for DC voltage, current inputs). | When operating |
| Er06<br>1 □500 (*2) | PV has dropped below Input range low limit value (Scaling low limit value for DC voltage, current inputs). | When operating |
| Er07<br>1 □500 (*2) | Input burnout or disconnection.<br>Input value is outside of the Indication range and Control range. | When operating |
| Er 10<br>1 □500 | Hardware malfunction or errors<br>(This error cannot be cancelled.) | When operating |
| Er20<br>1 □500 (*1) | AT has not been completed even if approx. 4 hours have elapsed since AT started.<br>When input errors have occurred. | After AT starts |

(*1) Can be cancelled by the MODE key.

(*2) An error code is indicated when Enabled is selected in [Error indication].

# 14. Making Program Pattern Table and Data Table
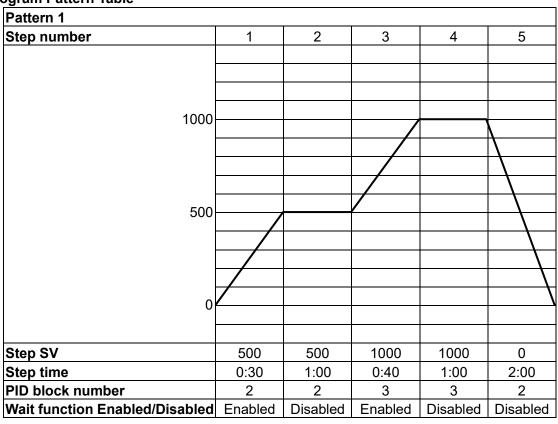

Before setting program, make a program pattern table and data table.

## 14.1 Making Program Pattern Table

Please make a copy of the program pattern table (p.161), and follow the procedure below.
(1) Write a step SV, step time, PID block number, Wait function Enabled/Disabled for
each step from Step 1 in numerical order.
(Even if the same block number is used, write it for every step.)
(2) Draw a line graph of step SV.

**Program Pattern Table**

| Pattern 1 | | | | | |
|---|---|---|---|---|---|
| **Step number** | 1 | 2 | 3 | 4 | 5 |
| **Step SV** | 500 | 500 | 1000 | 1000 | 0 |
| **Step time** | 0:30 | 1:00 | 0:40 | 1:00 | 2:00 |
| **PID block number** | 2 | 2 | 3 | 3 | 2 |
| **Wait function Enabled/Disabled** | Enabled | Disabled | Enabled | Disabled | Disabled |

(The line graph shows step SV on the Y axis with values 0, 500, 1000: rising from 0 to 500 in Step 1, holding at 500 in Step 2, rising to 1000 in Step 3, holding at 1000 in Step 4, dropping to 0 in Step 5.)

(Fig. 14.1-1)

**Explanation of Program Pattern Table**

Program pattern table consists of Y axis which represents the step SV (℃, ℉), and X axis which represents the step time (Hours : Minutes, Minutes : Seconds).
Step SV is considered to be the SV at the end of the step.
Step time is considered to be the step process time.

• The relation between the step SV and step time can be explained as follows.
Step 1: The control is performed so that the temperature reaches from 0 to 500℃ for 30 minutes.
Depending on the selection in [Program control start type], control is performed as follows.
• When SV start is selected: Performs control from the step SV set in [Step SV when program control starts] so that the temperature reaches 500℃.
• When PV start or PVR start is selected: Step SV and time are advanced to PV, and control starts so that the temperature reaches 500℃.
Step 2: The control is performed so that SV is maintained at 500℃ for 1 hour.
Step 3: The control is performed so that SV rises from 500℃ to 1000℃ for 40 minutes.
Step 4: The control is performed so that SV is maintained at 1000℃ for 1 hour.
Step 5: The control is performed so that SV drops from 1000℃ to 0℃ for 2 hours.

• PID block includes: OUT1 proportional band, Integral time, Derivative time, ARW, OUT2 proportional band
10 types of PID block (1 – 10) can be set.

• Wait function Enabled/Disabled can be selected for each step.

## 14.2  Making Data Table

Please make a copy of Data Table (p.162), and follow the procedure below.
(1) Write data for block numbers in Control parameter setting mode, by referring to the PID block numbers in the Program pattern table.
(2) For Wait value and other setting items, write the data in the table if required.

### About PID block settings

If program pattern is not set for a step, its PID block number becomes 1 (factory default). We highly recommend that you leave the factory default values of PID block 1 as they are, and set the values from PID block 2.

### • Example of PID block setting

| PID Block number | OUT1 P-band | Integral time | Derivative time | ARW | OUT2 P-band |
|---|---|---|---|---|---|
| 1 | 10℃ | 200 sec | 50 sec | 50% | 10℃ |
| 2 | 30℃ | 240 sec | 60 sec | 35% | 10℃ |
| 3 | 50℃ | 340 sec | 85 sec | 40% | 10℃ |

### • Example of Wait value setting

| Wait value | 10℃ |
|---|---|

Wait value is common to all steps for each pattern.

### • Example of other setting items

| Setting items | Data |
|---|---|
| OUT1 proportional cycle | 15 seconds |
| OUT2 proportional cycle | 15 seconds |
| Number of repetitions | 1 |
| Pattern link | Pattern link Disabled |
| Communication protocol | Shinko protocol |
| Instrument number | 1 |
| Communication speed | 38400 bps |
| Data bit/Parity | 7 bits/Even |
| Stop bit | 1 bit |
| Response delay time | 10 ms |

**Program Pattern Table**

Please make a copy of this table for use.

| Pattern number | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Step number | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| Step SV | | | | | | | | | | |
| Step time | | | | | | | | | | |
| PID block number | | | | | | | | | | |
| Wait function Enabled/Disabled | | | | | | | | | | |

**Data Table**

Please make a copy of this table for use.

**• PID block**

| PID Block number | OUT1 P-band | Integral time | Derivative time | ARW | OUT2 P-band |
|---|---|---|---|---|---|
| 1 | | sec | sec | % | |
| 2 | | sec | sec | % | |
| 3 | | sec | sec | % | |
| 4 | | sec | sec | % | |
| 5 | | sec | sec | % | |
| 6 | | sec | sec | % | |
| 7 | | sec | sec | % | |
| 8 | | sec | sec | % | |
| 9 | | sec | sec | % | |
| 10 | | sec | sec | % | |

**• Wait value**

| Wait value | |
|---|---|

Wait value is common to all steps for each pattern.
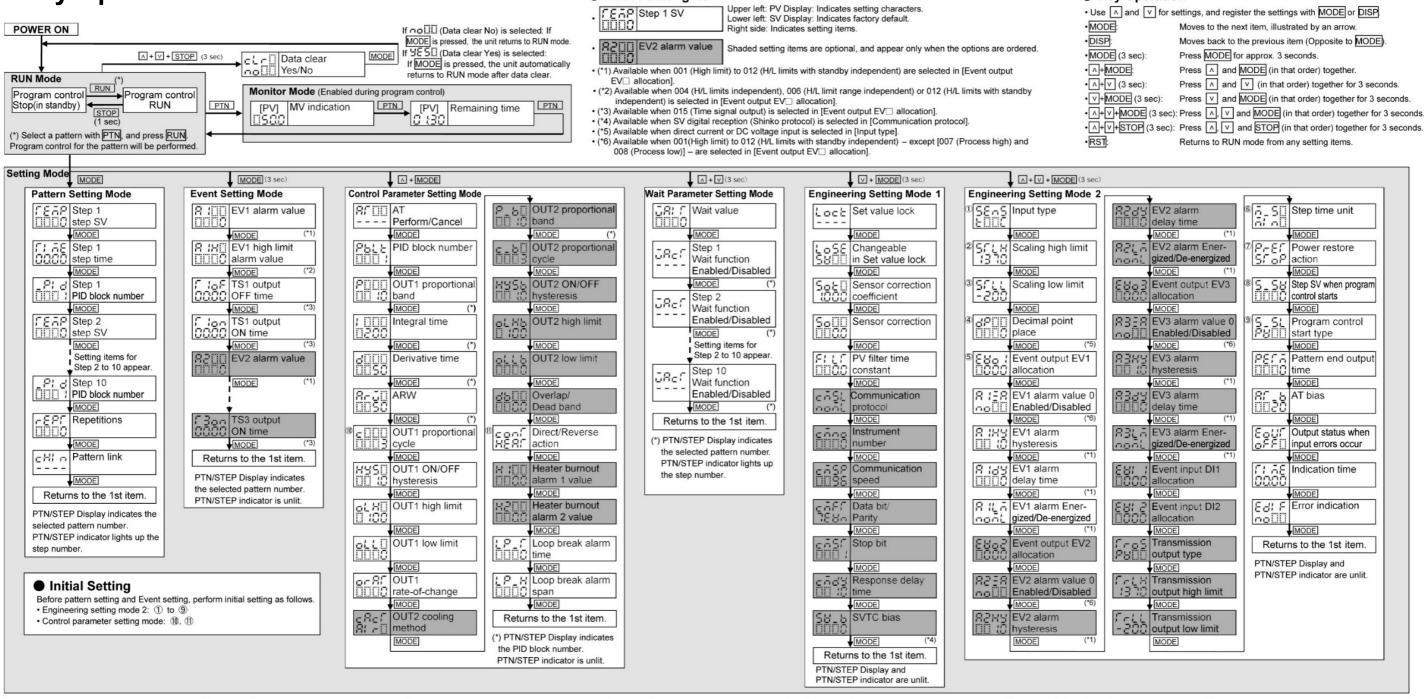

**• Other setting data** (Please use the blank for your own usage. )

| Setting item | Data |

# 15. Key Operation Flowchart

## ● About Setting Item

- **rEAP** / Step 1 SV — Upper left: PV Display: Indicates setting characters.
  Lower left: SV Display: Indicates factory default.
  Right side: Indicates setting items.

- **A2** / EV2 alarm value — Shaded setting items are optional, and appear only when the options are ordered.

- (*1) Available when 001 (High limit) to 012 (H/L limits with standby independent) are selected in [Event output EV□ allocation].
- (*2) Available when 004 (H/L limits independent), 006 (H/L limit range independent) or 012 (H/L limits with standby independent) is selected in [Event output EV□ allocation].
- (*3) Available when 015 (Time signal output) is selected in [Event output EV□ allocation].
- (*4) Available when SV digital reception (Shinko protocol) is selected in [Communication protocol].
- (*5) Available when direct current or DC voltage input is selected in [Input type].
- (*6) Available when 001(High limit) to 012 (H/L limits with standby independent) – except [007 (Process high) and 008 (Process low)] – are selected in [Event output EV□ allocation].

## ● Key Operation

- Use ∧ and ∨ for settings, and register the settings with MODE or DISP.
- **MODE**: Moves to the next item, illustrated by an arrow.
- **DISP**: Moves back to the previous item (Opposite to MODE).
- **MODE** (3 sec): Press MODE for approx. 3 seconds.
- **∧+MODE**: Press ∧ and MODE (in that order) together.
- **∧+∨** (3 sec): Press ∧ and ∨ (in that order) together for 3 seconds.
- **∨+MODE** (3 sec): Press ∨ and MODE (in that order) together for 3 seconds.
- **∧+∨+MODE** (3 sec): Press ∧, ∨ and MODE (in that order) together for 3 seconds.
- **∧+∨+STOP** (3 sec): Press ∧, ∨ and STOP (in that order) together for 3 seconds.
- **RST**: Returns to RUN mode from any setting items.

---

**POWER ON**

∧ + ∨ + STOP (3 sec) → **cLr** / Data clear / **noII** Yes/No → MODE

If **noII** (Data clear No) is selected: If MODE is pressed, the unit returns to RUN mode.
If **YES** (Data clear Yes) is selected: If MODE is pressed, the unit automatically returns to RUN mode after data clear.

### RUN Mode

Program control Stop (in standby) ⇄ Program control RUN

(*) Select a pattern with PTN, and press RUN. Program control for the pattern will be performed.

### Monitor Mode (Enabled during program control)

[PV] MV indication → [PV] Remaining time

---

## Setting Mode

### Pattern Setting Mode  [MODE]

- **rEAP** / Step 1 step SV
- **rtME** / Step 1 step time
- **Pid** / Step 1 PID block number
- **rEAP** / Step 2 step SV
  - Setting items for Step 2 to 10 appear.
- **Pid** / Step 10 PID block number
- **rEPt** / Repetitions
- **cHn** / Pattern link
- Returns to the 1st item.

PTN/STEP Display indicates the selected pattern number. PTN/STEP indicator lights up the step number.

#### ● Initial Setting
Before pattern setting and Event setting, perform initial setting as follows.
- Engineering setting mode 2: ① to ⑨
- Control parameter setting mode: ⑩, ⑪

### Event Setting Mode  [MODE] (3 sec)

- **A1** / EV1 alarm value (*1)
- **A1H** / EV1 high limit alarm value (*2)
- **T1oF** / TS1 output OFF time (*3)
- **T1on** / TS1 output ON time (*3)
- **A2** / EV2 alarm value (*1)
- **T3on** / TS3 output ON time (*3)
- Returns to the 1st item.

PTN/STEP Display indicates the selected pattern number. PTN/STEP indicator is unlit.

### Control Parameter Setting Mode  ∧ + [MODE]

- **AT** / AT Perform/Cancel
- **PbLt** / PID block number
- **P** / OUT1 proportional band
- **I** / Integral time
- **d** / Derivative time
- **ArW** / ARW
- **c** / OUT1 proportional cycle ⑩
- **HYS1** / OUT1 ON/OFF hysteresis
- **oLH** / OUT1 high limit
- **oLL** / OUT1 low limit
- **or** / OUT1 rate-of-change
- **cAc** / OUT2 cooling method

- **P-b** / OUT2 proportional band (*)
- **c-b** / OUT2 proportional cycle (*)
- **HYS2** / OUT2 ON/OFF hysteresis (*)
- **oLH** / OUT2 high limit (*)
- **oLL** / OUT2 low limit (*)
- **db** / Overlap/ Dead band (*)
- **HEAr** / Direct/Reverse action ⑪
- **A1** / Heater burnout alarm 1 value
- **A2** / Heater burnout alarm 2 value
- **LP** / Loop break alarm time
- **LP** / Loop break alarm span
- Returns to the 1st item.

(*) PTN/STEP Display indicates the PID block number. PTN/STEP indicator is unlit.

### Wait Parameter Setting Mode  ∧ + ∨ (3 sec)

- **JAr** / Wait value
- **JAc** / Step 1 Wait function Enabled/Disabled (*)
- **JAc** / Step 2 Wait function Enabled/Disabled (*)
  - Setting items for Step 2 to 10 appear.
- **JAc** / Step 10 Wait function Enabled/Disabled (*)
- Returns to the 1st item.

(*) PTN/STEP Display indicates the selected pattern number. PTN/STEP indicator lights up the step number.

### Engineering Setting Mode 1  ∨ + [MODE] (3 sec)

- **Lock** / Set value lock
- **LoSE** / Changeable in Set value lock
- **Sot** / Sensor correction coefficient
- **So** / Sensor correction
- **FILt** / PV filter time constant
- **cASL** / Communication protocol
- **cno** / Instrument number
- **cSP** / Communication speed
- **cAt** / Data bit/ Parity
- **cSt** / Stop bit
- **cdY** / Response delay time
- **Sb** / SVTC bias (*4)
- Returns to the 1st item.

PTN/STEP Display and PTN/STEP indicator are unlit.

### Engineering Setting Mode 2  ∧ + ∨ + [MODE] (3 sec)

- **SEnS** / Input type ①
- **ScLH** / Scaling high limit ②
- **ScLL** / Scaling low limit ③
- **dP** / Decimal point place ④
- **EU1** / Event output EV1 allocation ⑤
- **A1** / EV1 alarm value 0 Enabled/Disabled (*6)
- **A1HY** / EV1 alarm hysteresis (*1)
- **A1dY** / EV1 alarm delay time (*1)
- **A1L** / EV1 alarm Energized/De-energized (*1)
- **EU2** / Event output EV2 allocation
- **A2E** / EV2 alarm value 0 Enabled/Disabled (*6)
- **A2HY** / EV2 alarm hysteresis (*1)

- **A2dY** / EV2 alarm delay time (*1)
- **A2L** / EV2 alarm Energized/De-energized (*1)
- **EU3** / Event output EV3 allocation
- **A3E** / EV3 alarm value 0 Enabled/Disabled (*6)
- **A3HY** / EV3 alarm hysteresis (*1)
- **A3dY** / EV3 alarm delay time (*1)
- **A3L** / EV3 alarm Energized/De-energized (*1)
- **EU1** / Event input DI1 allocation
- **EU2** / Event input DI2 allocation
- **roS** / Transmission output type
- **rLH** / Transmission output high limit
- **rLL** / Transmission output low limit

- **A-SE** / Step time unit ⑥
- **PrES** / Power restore action ⑦
- **S-SU** / Step SV when program control starts ⑧
- **S-SL** / Program control start type ⑨
- **PEn** / Pattern end output time
- **AF** / AT bias
- **EoUt** / Output status when input errors occur
- **tME** / Indication time
- **Ed** / Error indication
- Returns to the 1st item.

PTN/STEP Display and PTN/STEP indicator are unlit.

---

| Pattern link | | | Stop bit | | | | R | 32 to 3200 °F | | 3 digits after decimal point | | Heating/Cooling control output * | Power restore action | |

***** Inquiries *****

For any inquiries about this unit, please contact our agency or the
vendor where you purchased the unit after checking the following.

[Example]
- Model ----------------------------- PCB1R00-52
- Option ---------------------------- EV3(DR), C5W(100A)
- Serial number ------------------- No. 173F05000

In addition to the above, please let us know the details of the
malfunction, or discrepancy, and the operating conditions.
